

Meta Programs Overview

THE FULL 60 META PROGRAMS

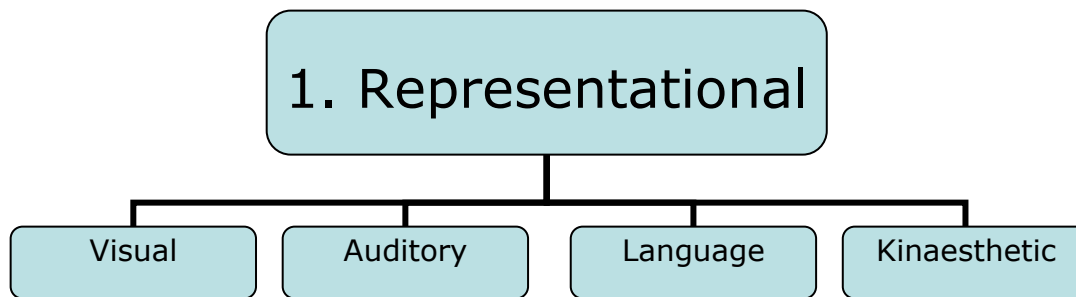

Meta Programs

1. Representational	Visual, Auditory, Language, Kinesthetic
2. Epistemological	Sensor, Intuitor
3. Scale	Detail, Global
4. Relationship Comparison	Matching Sameness, Mis-matching Differences
5. Information Staging	Counting, Discounting
6. Scenario Type	Pessimistic, Optimistic
7. Classification Scale	Either- Or, Continuum, Multi-Dimensionality
8. Nature	Aristotelian – Static, Non Aristotelian - Changing
9. Focus	Screening, Non Screening
10. Philosophical	Why, How
11. Communication Channel	Verbal, Non Verbal
12. Durability	Permeable beliefs, Non Permeable beliefs
13. Causation	No causation, Linear, Complex, Personal, External, Magical, Correlation
14. Completion	Closure, Non Closure
15. Information Kind	Quantitative, Qualitative
16. Stream of Consciousness	Focused, Diffused
17. Conventional	Conformist, Non Conformist
18. Speed	Deliberate & Slow, Quick & Witty
19. Convincer Representation	Looks Right, Makes Sense, Sounds Right, Feels Right
20. Movie Position	Inside, Outside
21. Exuberance	Timid Desurgence, Bold Surgency
22. Stress Coping	Passive, Assertive, Aggressive
23. Authority	Internal Referencing, External Referencing
24. Attention	Self, Others
25. Emotional Containment	Uni-directional, Multi-directional
26. Rejuvenation	Introvert Recharging, Extrovert Recharging
27. Somantic Response	Inactive – Reflective, Active - Reactive
28. Social Presentation	Socially Naïve, Socially Sophisticated
29. Dominance	Achievement, Affiliation, Power
30. Work Style	Independent, Team Player, Manager, Bureaucrat

Meta Programs

31. Change Adaptor	Closed to Change, Open to Change
32. Attitude	Serious, Playful
33. Persistence	Impatient, Patient
34. Convincer Demonstration	Automatic, Repetitions, Time Period, Never
35. Motivation	Towards, Away From
36. Operational Style	Procedures, Options
37. Adaption	Want life to adapt to them, Adapt to life
38. Modus Operandi	Impossibility, Necessity, Desire, Possibility, Choice
39. Preference	People, Place, Things, Activity, Time, Information, Systems
40. Goal Striving	Scepticism, Optimizing, Perfectionism
41. Buying	Cost, Quality, Time
42. Social Convincer	Distrusting of others, Trusting of Others
43. Interactive	Win / Lose, Win / Win
44. Directness	Inferential, Direct
45. Management	Control, Delegation, Collaboration
46. Risk Taking	Approach, Avoid
47. Decision	Cautious, Balanced, Bold
48. Self Experience	Mind, Emotion, Will, Body, role / Position, Spirit, Disidentified
49. Self Instruction	Compliant, Strong willed
50. Self Confidence	Low, High
51. Self Esteem	Unconditional, Conditional
52. Self Integrity	Conflicted, Harmonious
53. Responsibility Sort	Under, Over, Healthy
54. Ego Strength	Low, High
55. Morality	Low, High
56. Self Monitoring	Low, High
57. Time Zones	Past, Present, Future, Atemporal
58. Time Experience	In time, Through Time
59. Quality of Life	Doing, Having, Being
60. Values	High, Low

**Description:**

This is the way we take information from our external senses and reproduce it in our minds. Most people develop and use a favourite representational system in their thinking.

Questions:

When you think about things, do you prefer to see pictures, hear sounds, feel feelings or use words?

When you learn something new, which sensory system do you use?

Visual:

- People who process and organise their world visually.
- Move eyes upwards when visualizing.
- Defocus their eyes to imagine things out in front of them.
- Like to look at others when talking.
- Use terms such as see, view, peek, show, looks right, spot, glance.

Auditory:

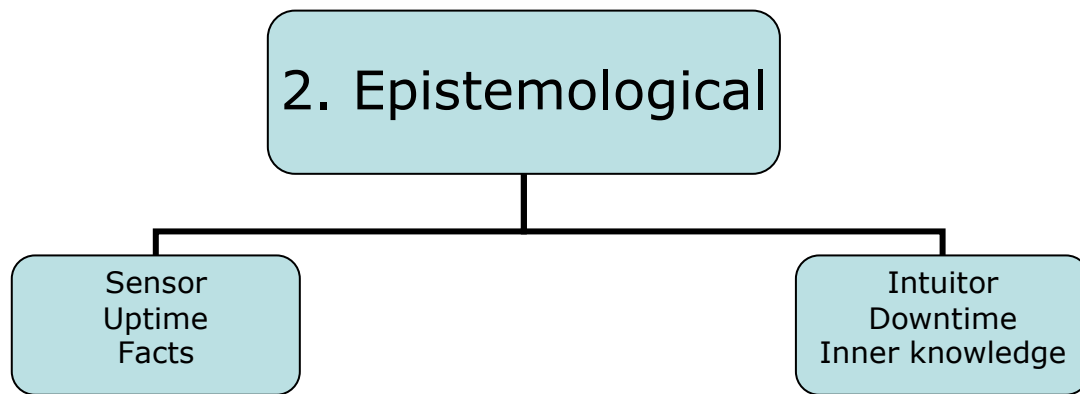

- Process and move their eyes with sound.
- Move eyes from side to side when accessing information.
- May have the gift of the gab.
- May be sensitive to tones and volumes.
- May point to their ear.
- Use terms such as listen, hear, sounds right, call, whisper, quiet.

Language:

- Live in a world of words.
- Have little awareness of pictures, sounds or sensations.
- Love reading, studying.
- Use terms such as lists, criteria, words, rules.

Kinaesthetic:

- Process and organise things with their body sensations.
- Move eyes downward.
- May breathe deeply, talk and move slowly.
- Use a lot of gestures.
- Use terms such as touch, feel, fall, struggle, handle, sense, move.

Description:

This is the way we gather information. We can do this through our senses (what we see, hear & feel), or by intuiting.

Questions:

When you listen to a conversation, do you notice specific facts and figures, or do you intuit what the speaker means?

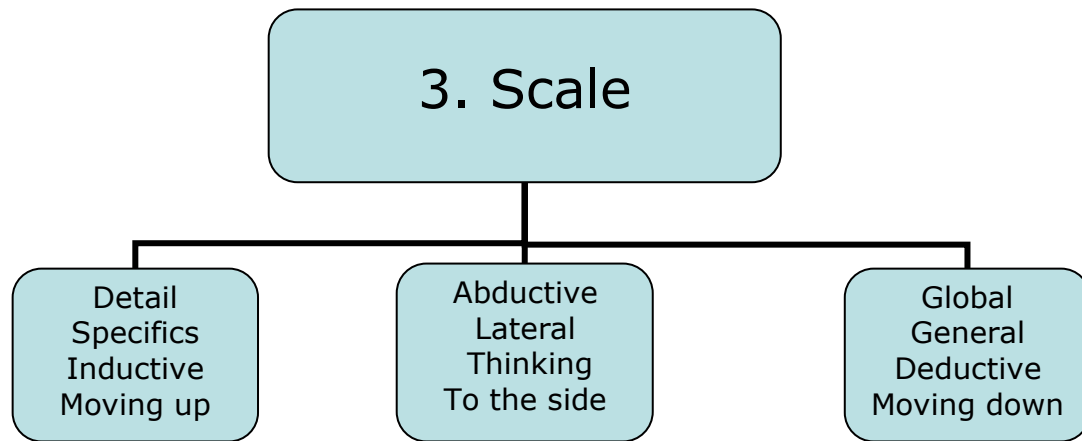

What do you consider more important, the actual or the possible?

Sensor:

- Gather information through the senses, eg seeing, listening, feeling, tasting and smelling.
- Accessing an uptime state.
- Prefer facts and figures.
- Practical, down to earth, real.
- Prefer demonstrations as a source of information.

Intuitior:

- Gather information from the inside rather than the outside.
- Use their own inner knowledge, experience, insights, meanings or intuition.
- Look for possibilities, meanings relationships and patterns.
- Access down time state and move through the world mind reading.
- Pay attention to gut feelings.

Description:

When thinking, communicating, learning, and understanding, most of us have a preference for the size of information we are dealing with. Some like to begin with small and move up to larger chunks, some begin with the big picture, and move down to the details.

Questions:

What do you want to know when you first hear something new – the big picture or the details?

If we were doing a project together, do you want to know the general purpose of it first, or the details of what we have to do?

Inductive Thinking from Details:

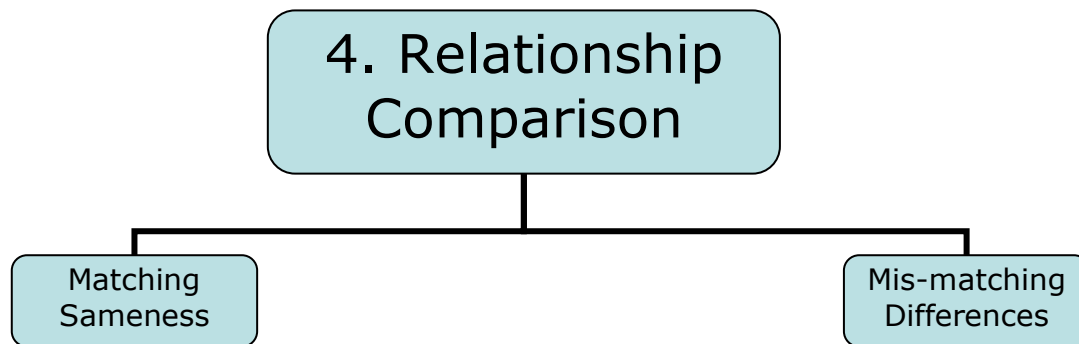

- Begin small and move up to larger chunks.
- Start at the level of details with lots of specificity and move upward.
- Likes the details.
- Sees the trees, rather than the forest.

Abductive Lateral Thinking

- Does not move up or down, but to the side.
- Thinks about one thing in relation to something else.
- Thinks about analogies, riddles, stories.
- Lateral thinking.

Deductive Thinking from Global

- Begin with the big picture of things, the global or overall view, and move downwards to smaller and smaller chunks.
- Begin with principles, concepts, and beliefs.
- Prefer to start with an overall understanding.
- Deduce downwards to specific details.
- May be bored with details.
- Sees the forest first, not the trees.

Description:

How we work with, filter and compare information.

Questions:

What relationship do you first see between where you live now, and your previous home?

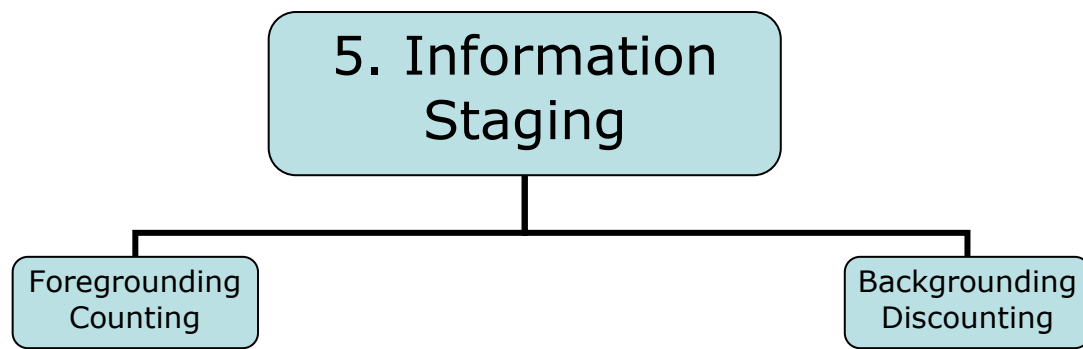

Do you approach things trying to match what we already know, or search for how it differs?

Matching Sameness:

- Search for commonalities.
- Search for correlations.
- Search for sameness between current experience and previous experience.
- Value security, regularity and stability.
- Want things to stay the same.
- Do not like change.
- Conservative approach.
- Love terms such as mutual agreement, security, what you both want.
- Respond with "Isn't this like..."
- More people match than mis-match.

Mis-Matching for Differences:

- First notice things that differ.
- Search for distinctions.
- Search for exceptions.
- Value change, variety and newness.
- Find static boring.
- Will notice differences, problems and things that do not fit.
- Love terms such as re-engineering, innovation, different, trouble shooting, adventurous, evolving and new.
- Give counter examples to statements "Yes, but..."
- Entrepreneurs are often mis - matchers.

**Description:**

When we represent a thought in our mind, we generally position it either front and centre, in the background, or off to the side. Our positioning is generally dependent upon what stands out, is important and counts for us.

Questions:

Where do you typically stage good or bad news in your mind?

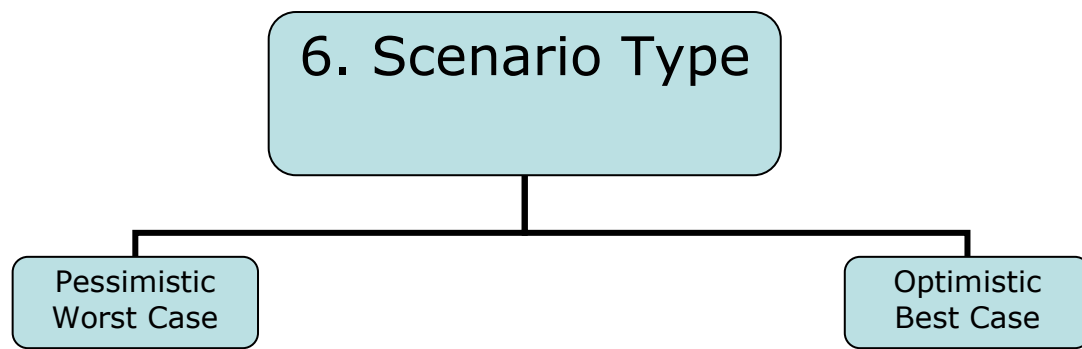

What is in the foreground of your mind?

Foregrounding / Counting:

- Take credit, validate, affirm, recognise, acknowledge, and add up the small steps.
- Reflect on successes, even small ones.
- Congratulate ourselves.
- Counting reinforces feelings and behaviours.

Backgrounding / Discounting

- Think "Should have done better and more".
- Discount the value of what we are doing and learning.
- Do not take any pleasure in small steps.
- Thinking undermines all kinds of potential resources.
- Discounting small beginnings prevents us from learning through trial and error.
- Discounting distractions can serve us.

**Description:**

These two approaches govern how we experience the things that happen and how we respond.

Questions:

When you encounter a difficulty, do you first consider the worst-case scenario or the best?

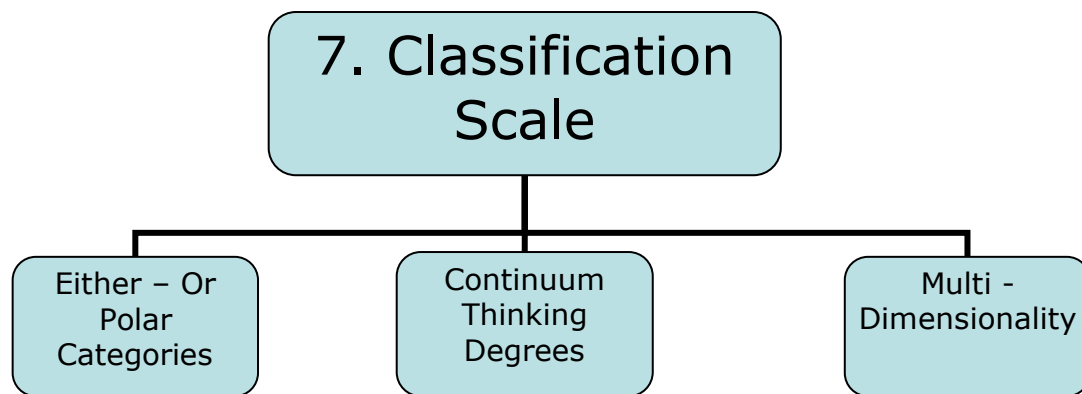

Do you generally see the glass half empty or half full?

Pessimistic Worst Case Thinkers:

- First looks for problems, dangers, threats, obstacles, difficulties and challenges.
- Focuses on problems.
- May generate feelings of worthlessness, hopelessness and helplessness.
- Extreme pessimists are guaranteed misery forever.
- Will speak about problems, dangers, threats, and difficulties.

Optimistic Best Case Thinkers:

- First looks for challenges to deal with, opportunities to master, doors to new possibilities, chances to grow.
- Optimistic, hopeful, goal inspired, empowered.
- Looks for the good in things.
- Extreme optimists may deny problems and live illusions.
- Will speak about dreams, visions, solutions, ideas, and suggestions.

**Description:**

This refers to how we package or classify information. Either – Or thinking is the kind we use to classify major categories, eg day and night. Continuum thinking (fuzzy) helps us use degrees and possibilities. All of us default back to black and white thinking when stressed or threatened.

Questions:

Which do you prefer, clear categories or the grey thinking in between?

When you speak or think, do you use solid and firm categories, or probabilities, percentages or degrees?

Either – Or:

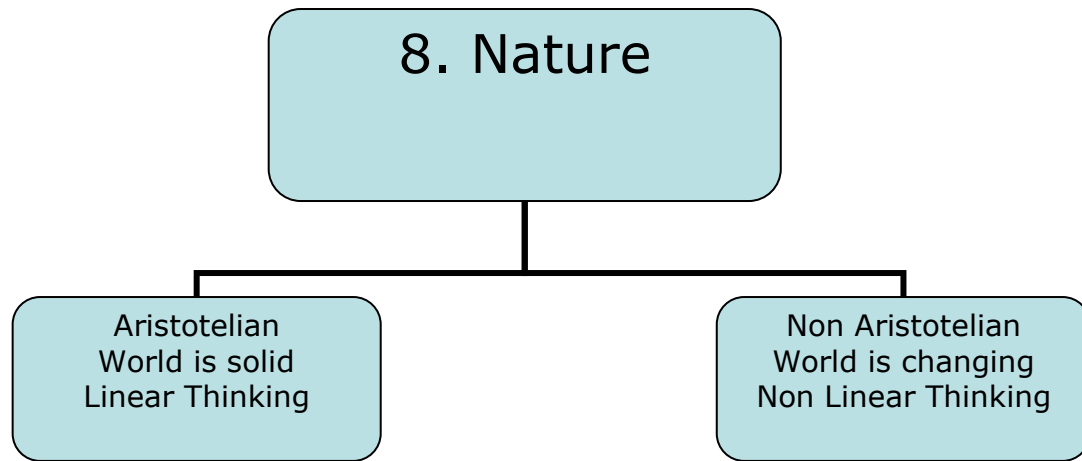

- Will think in terms of black and white, with clear distinctions for boundaries.
- Are decisive, and can make a judgement call on something.
- Taken to the extreme, all or nothing thinking can be the result.
- Black and white thinkers are in danger of missing all the choices in the middle.

Continuum Thinking:

- Can discriminate at a much finer level.
- Can work with the “fuzzy” areas.
- Taken to the extreme, can result in “Yes, but” responses.
- Can result in indecision.

Multi – Dimensionality:

- Can think in both either – or thinking and continuum thinking simultaneously.

Description:

This Meta program focuses on how we categorize things regarding the nature of the world and how we perceive this nature. Some people see the world in terms of dynamic processes, while others see it as more static and permanent.

Questions:

Do you think about things as permanent and solid, or as ever changing processes?

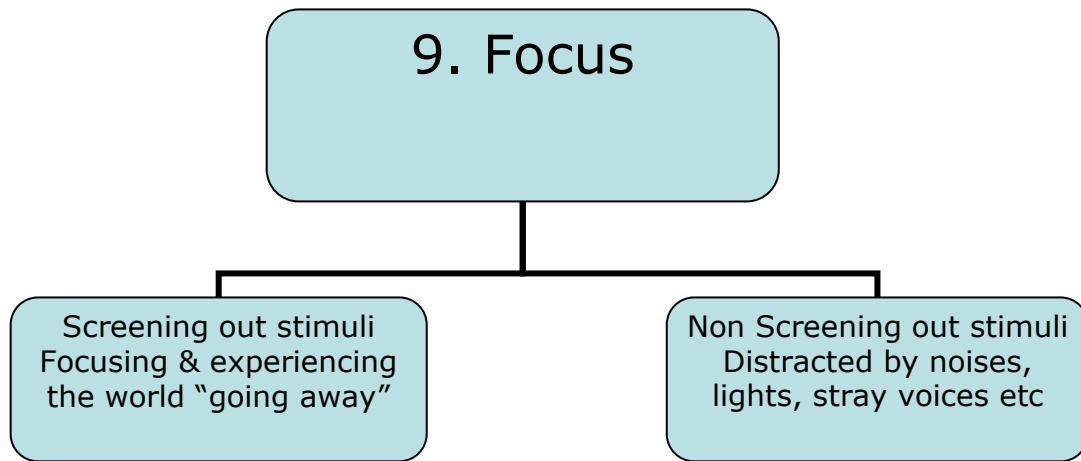

Is the world made up of concrete things or ongoing ever-changing processes?

Aristotelian Thinking:

- Aristotelian thinking is static and linear.
- See the world populated with “things” and objects.
- See change as rare, hard and painful.
- Will describe things the way they “are”.
- Think in black and white terms.

Non-Aristotelian Thinking:

- Involves perceiving in terms of processes and change lying at the heart of reality.
- Thinks about the interactions, relationships, dynamics and involvements within systems.
- Use verbs and processes in language.

Description:

This Meta – Program refers to how much of the environment people characteristically screen out. Some people screen none, while others screen out a great deal. People react differently to how long it takes before they experience stimulus overload and therefore neuro-semantic “stress”.

Questions:

Can you read or study anywhere, or do you prefer a quiet environment?

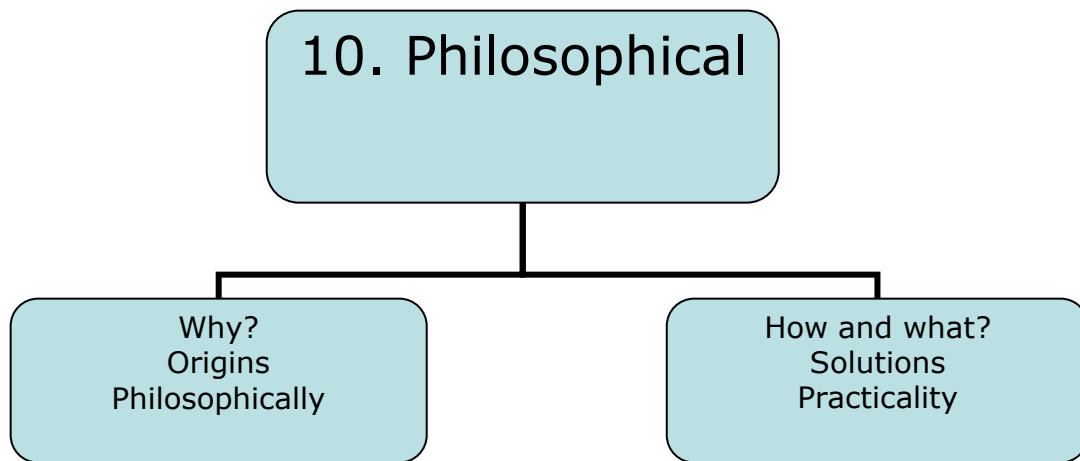

How distractible are you generally when reading, playing, talking or listening?

Perceiving by Screening:

- “Screener” can select what they notice and screen everything else out.
- Screeners do not find the environment a controlling factor in their state of mind.
- When taken to the extreme, screeners can come across as zoned out or uncaring.

Non screening Perceivers:

- “Non screeners” do little screening.
- They see, hear, feel and smell a great deal of the environment around them.
- They fail to shut out unimportant or irrelevant stimuli.
- They will talk more about wanting quiet, peace, comfort and no distractions.

**Description:**

This Meta- Program focuses on the degree that people naturally focus on philosophy or practicality. Why? Or How?

Questions:

Which do you find more interesting? The why or the how?

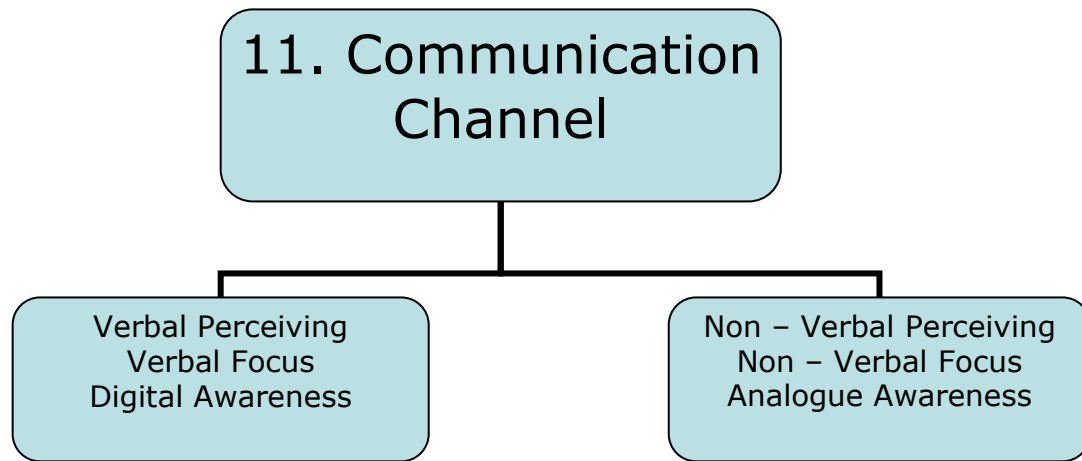

When you think about a subject, do you first think about the causation, source and origins (why), or do you think about the use, function, direction or destiny (how)?

Why:

- Focus on why things are as they are, and their origin and history.
- They invest a lot of importance and emphasis on wanting to know why.

How:

- Focus on the use and purpose of things.
- They move to the solution focus rather than the why.
- They ask, "How can I use or respond to this?"

**Description:**

This Meta – Program deals with which channel people prefer to receive information. The verbal channel is more content, for example, language, music, maths, and art. The non-verbal channel refers to more to signal cues and relationships, for example, breathing, posture, gestures and eye scanning.

Questions:

When you are communicating with someone, what do you focus on, what they say, or how they say it?

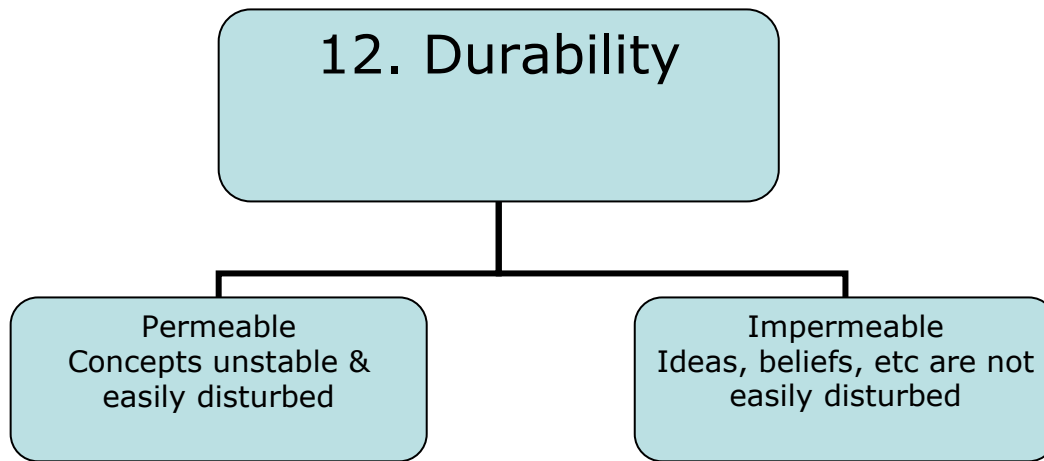

When you hear someone say something that seems incongruent with how they express it, which to you is the more “real” message?

Verbal Perceiving:

- Focus on what others say, their language, terms, phrases etc.
- Likely to use the language representational system.
- More likely to distrust their senses and intuitions.

Non-Verbal Perceiving:

- Focus on how people talk.
- Will sort for tone, tempo, pitch, breathing etc.
- Will distrust the verbal channel.
- In danger of mind reading others.

**Description:**

This Meta – Program refers to the quality of people’s mental constructs in terms of their permeability or impermeability. Some people live with rigid and concrete beliefs, while other people’s beliefs are revised and extended in light of new experiences.

Questions:

Think about something you are sure of without a doubt. Now think about something you know, but you have doubts and questions. How do these sets of representations differ?

When you think about a belief of yours, how can you tell if it is permanent or unstable?

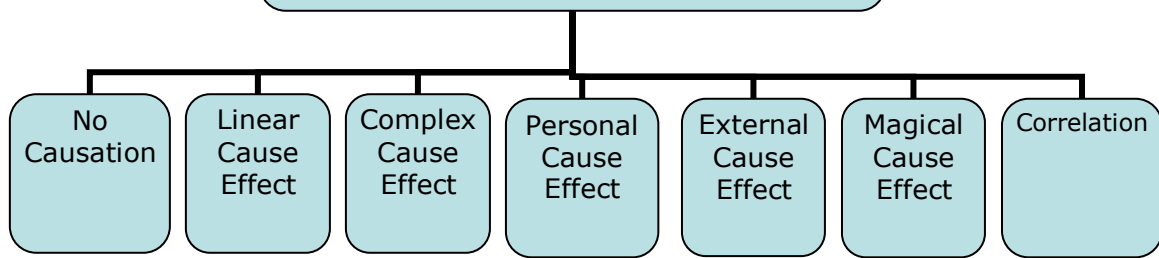

Permeable Perceiving:

- Constructs are capable of being revised and extended.
- Use terms and words for doubt, hesitation, questions etc.
- Use words such as “can, will”.

Impermeable Perceiving:

- Move through life with rigid and unyielding beliefs and belief systems.
- Construct images that seem concrete and locked in.
- Uses terms and words of sureness “absolutely. No question”.
- Use words such as “must, can’t”.

13. Causation

Description:

This Meta – Program distinguishes the possible ways we can perceive how things work, what causes things, and the concept of causation.

Questions:

Why did you choose to work at your current job?

What makes people behave as they do?

No Causation:

- Things just happen by randomness and chance.

Linear Causation:

- Everything results from direct and immediate causation eg maths, physics and chemistry.

Complex Cause Effect:

- Systems thinking, multiply contributing factors.

Personal Cause Effect:

- Thinking in terms of the role we play in causing, effecting and influencing things.

External Cause Effect:

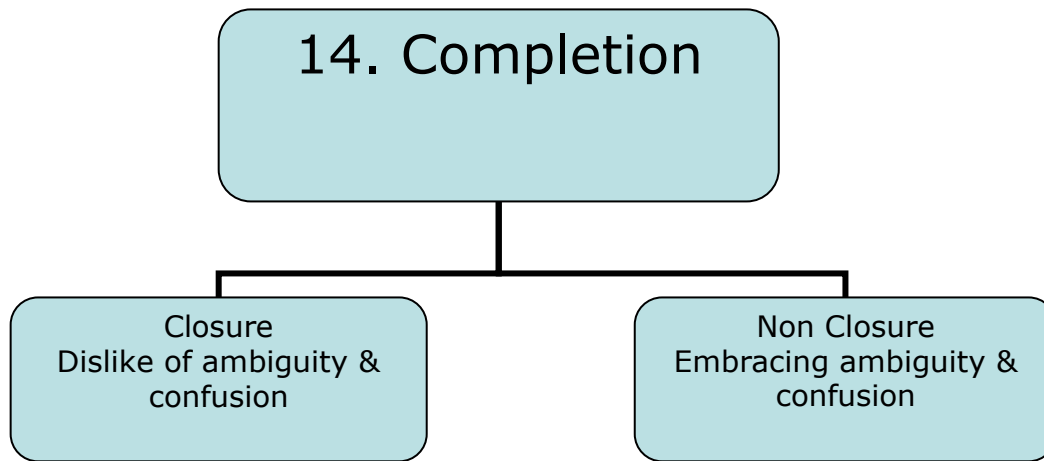

- Believe we play no role in causing effecting or influencing things.

Magical Cause Effect:

- Magical thinking, wishes, gods, angels, demons.

Correlation:

- Something *causes* something else, even if it is not a contributing factor in reality.

Description:

This Meta – Program relates to how people handle closure or the lack of closure.

Questions:

When someone begins telling a story and they do not finish it, how do you feel?

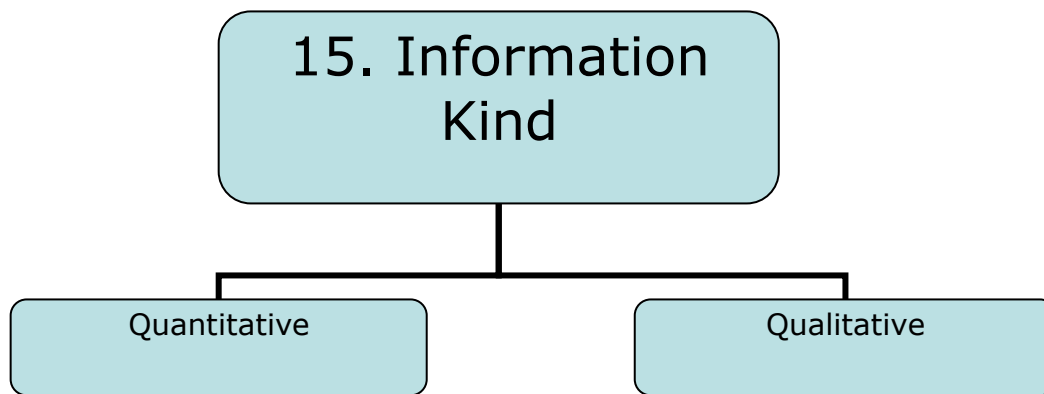

How does it sit with you if someone mentions five points and then only lists four?

Closure Perceiving:

- Are energised by the need to close things.
- Uncertainty and ambiguity does not settle well with them.
- Wants to compartmentalize things.

Non-Closure Perceiving:

- Do not need closure.
- Enjoy and perform better at the beginning and middle of a task, project or relationship.

**Description:**

This Meta – Program refers to the kind of information people need and want. Do people prefer quantitative information about numbers and measurement, or qualitative information relating to meaning?

Questions:

How would you evaluate your work or your relationship?

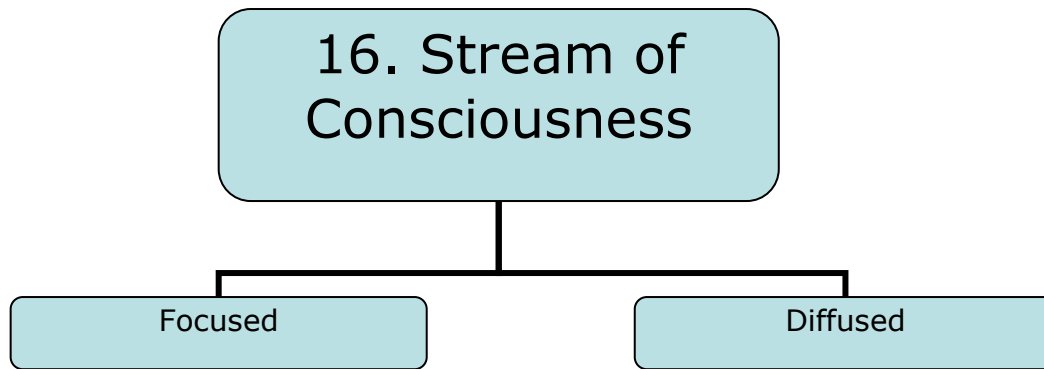

How do you know the quality of your work?

Perceiving by Quantification:

- Prefer information about numbers, measurements and specific factual information.
- Think in terms of numbers, times, amounts, rank, order, standards etc.
- Prefer to start with concrete details.

Perceiving by Qualification:

- Prefer information relating to meaning.
- Relate to the quality of the experience, good, better, and poor excellent.
- Refer to internal factors such as meanings and principles.
- Will start at a global level.

**Description:**

This Meta = Program focuses on the quality and nature of one's focus – the pointedness of the focus, whether the focus is concentrated on a singular object or diffused.

Questions:

How focused or diffused is your awareness?

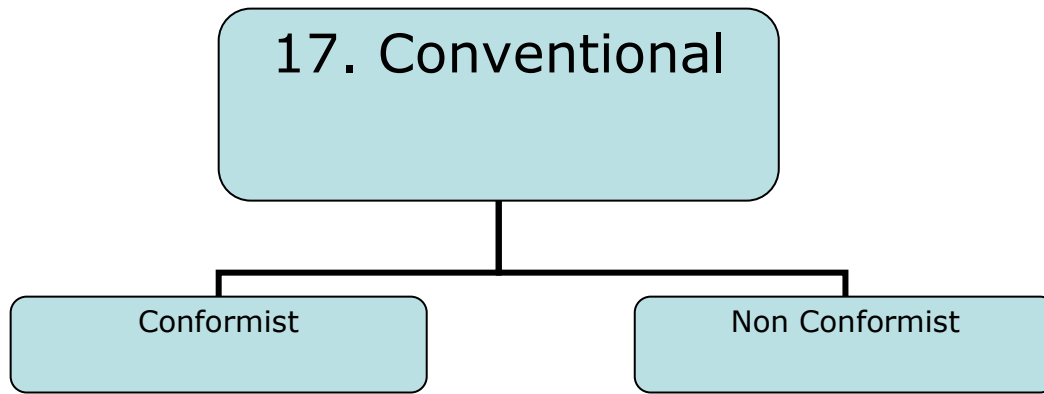

Are you focused in your awareness or easily distracted?

Focused Perceiving:

- Think in a directed and concentrated way.
- Will stay on subject, and finish projects.
- Zoom in on a target and focus attention specifically on it.

Diffused Perceiving:

- Thinking is diffused, un-focused and un-restrained.
- Attention spread widely in many directions at the one time.
- "I'm just all over the place".

**Description:**

This Meta – Program refers to how a person thinks about “fitting in” with others, a group or society. It focuses on how conventional or unconventional a person’s thinking and focus is.

Questions:

How important to you is fitting in with others?

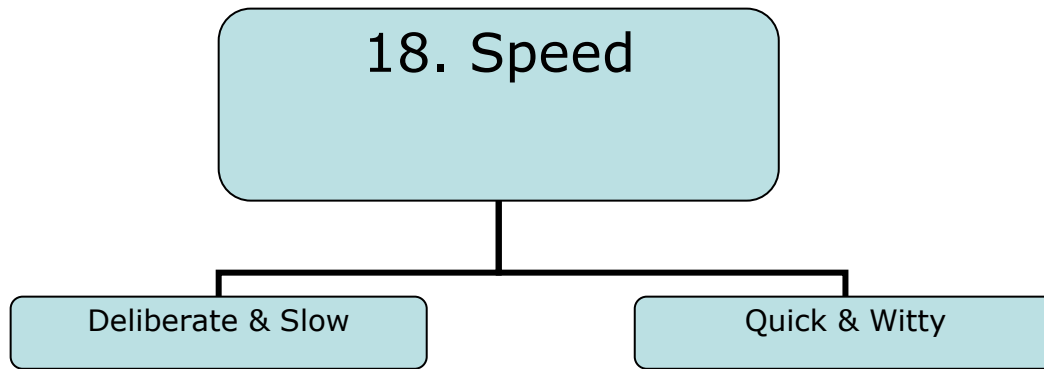

How much time do you spend thinking about being accepted by others?

Conformist Perceiving:

- Thinks and cares a lot about fitting in, getting along and being accepted by others.
- Cares about appearances.
- Does not always like change.

Non conformist perceiving:

- Doesn’t care about the status quo.
- Has little regard for social propriety.
- Loves to have options and alternatives.
- May be a rebel.
- Does not get along with authority.

**Description:**

This Meta - Program relates to the speed of a person's thought processes. It deals with the quickness or slowness of a person's mental processes and wit.

Questions:

Are you a quick thinker and speaker?

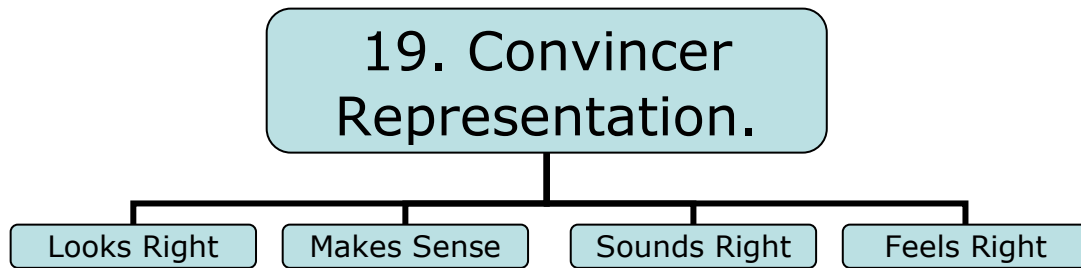

Do you typically jump to conclusions when you listen, read and reflect?

Deliberate and Slow Perceiving:

- Will process information more slowly and be deliberate, thoughtful and steady.
- Can be adamant, even rigid once their mind is made up.
- Can be painfully slow to change their mind.

Quick and Witty Perceiving:

- Thinks quickly.
- Will be witty and quick to get things done.
- Changes mind quickly.
- Tempted to jump to conclusions and make rash decisions.

**Description:**

This Meta – Program deals with different strategies for feeling convinced about the value, importance or significance of things. It also deals with how people make decisions.

Questions:

What convinces you to feel sure about something?

When in the process of decision-making, what representations evoke the convinced feeling in you?

Looks Right:

- Will be convinced when something looks right to them.
- Visual aids, diagrams, pictures etc helps with decision-making.

Makes Sense Linguistically:

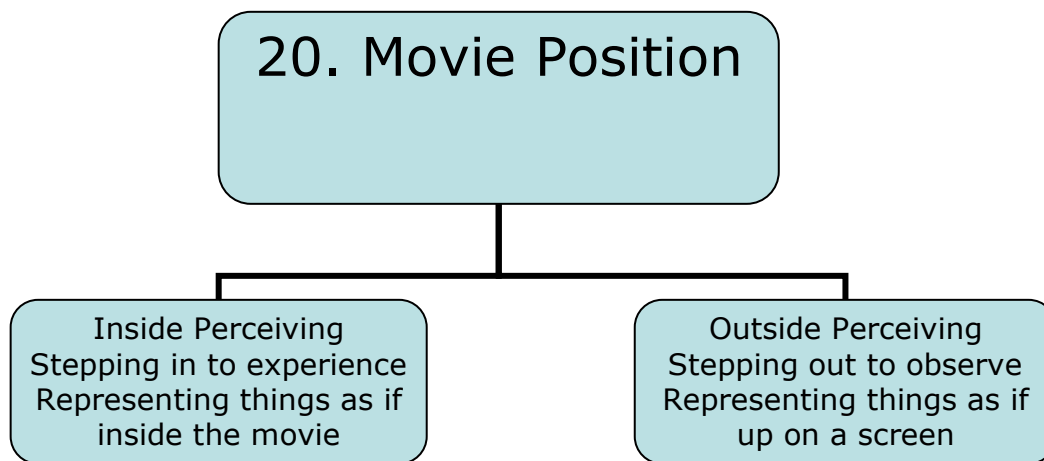

- Will be convinced by data, facts and information.
- Books, reports, letters of recommendations will help convince.

Sounds Right:

- Will be convinced when something sounds right.
- The voice of the person trying to convince is important.

Feels Right:

- Will be convinced when something feels right.
- Hands on experience will have a significant impact when being convinced.

Description:

This Meta – Program relates to how people process data – either by stepping into pictures and experiencing it, or stepping out and just observing it.

Questions:

When you think about an event or situation that gave you trouble and step back into that memory, what do you see, hear and feel?

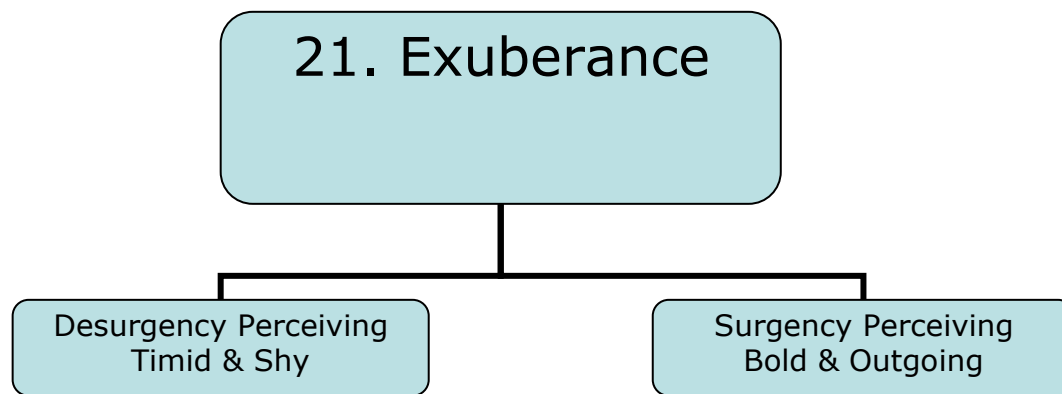

When you remember something, do you see through your own eyes (as if you are in the movie) or do you watch yourself (as if you are a camera recording you?).

Inside Perceiving, the step in Position:

- See what would be seen from inside the movie.
- Hear, smell taste, see and smell as if there.
- When remembering, will feel and re-feel as if re-experiencing all of the sights, sounds and sensations.
- Out of control stepping can create extreme emotions and stress.
- Chronic stepping in leads to the movie playing subconsciously and evoking negative and limiting emotions.

Outside Perceiving, the step Out Position:

- Think and process data from with a degree of psychological distance from the emotional impact of the experience.
- Looks back and sees the younger self.
- On the outside looking in.
- Stepped outside the image so to think 'about' it.
- Has emotions about the representation (rather than the emotions of the representation).

Description:

This Meta – Program relates to how people experience an emotional state, its degree and intensity. Surgency means, “to surge forth with energy, hope, excitement, fun etc”. Desurgency means to move forward without these qualities. This Meta Program relates to the emotional exuberance of a person on a continuum from shy, timid, restrained, and threat – sensitive to adventurous, thick skinned and socially bold.

Questions:

When you feel an emotion, do you do so with energy that surges forth through out your entire body, or are you more reserved in your emoting?

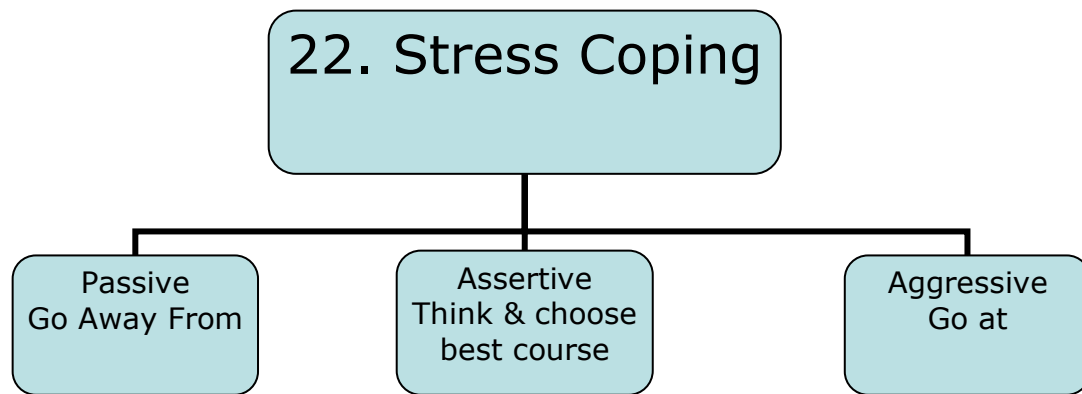

Do you think of yourself as a “sensitive person” with a low threshold for excitability?

Desurgency Perceiving:

- Full of worries, reflective of danger and risks, cautious, negative and avoidant.
- Low emotional intensity.
- Cling to certainty and predictability.
- Protect themselves by going into a shell, avoiding risks.
- When overdone, can be driven by fear and act as a doormat to others.

Surgency Perceiving:

- Move forward in a cheerful, happy-go-lucky style.
- Are frank, quick, alert and talkative.
- High emotional intensity.
- Seek out fun, excitement joy and even fear.
- Like to be the centre of attention.
- When overdone, can lead to anti-social behaviour.

Description:

This Meta – Program relates to stress and how people cope and perceive when they feel stress. There are two primary patterns for coping with stress, the “go at” and the “go away from” responses. These emotional coping responses arise from the fight / flight syndrome built into a person’s neurology.

Questions:

When you feel threatened do you want to immediately respond on an emotional level by wanting to get away from it or to go at it?

Do you think and perceive stressors as something to move toward to confront, take on and deal with, or do you perceive the stressors as something to move away from and avoid?

Passive Perceiving, moving away from:

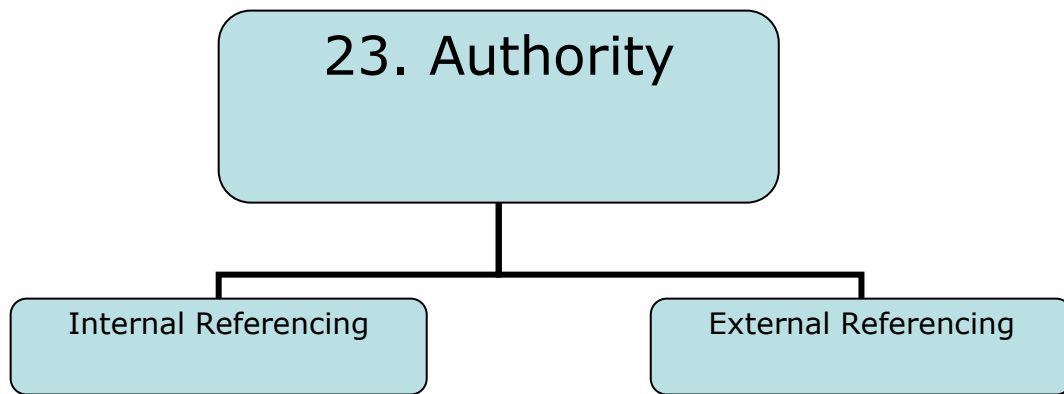

- Will forever seek to avoid stress, confrontations, threats and dangers.
- Want more than anything to make peace.
- Want to create harmony, and make things pleasant for everybody.
- When overdone, are people pleasers and doormats.
- Will talk about necessity, shoulds, musts, rules etc.

Assertive Perceiving, keeping presence of mind to think and choose:

- Has learned to stop fighting or flighting and learned to cope with the stress.
- Will still experience the urge to fight or flee, but has learnt to manage that urge without acting on it.
- Can choose to step out of the stress to deal with it.

Aggressive Perceiving, going at the stressors:

- Enjoy challenges, stress, pressure and adventure.
- When overdone, can become violent, dangerous and out of control.
- May manipulate through intimidation and threatening.
- Will talk about possibility, ideals and hopes.

**Description:**

This Meta – Program deals with where people look for authority, rights and privileges and permission to do things. Some people look internally to their own thoughts, feelings etc, while others look externally to some outside factor.

Questions:

If you were to draw a circle to represent authority, would you put yourself inside or outside that circle?

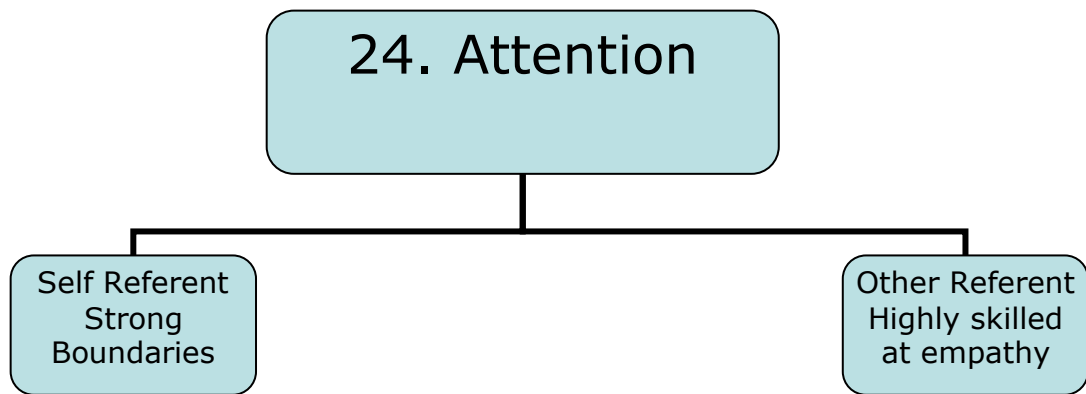

How do you know that you have made the right decision?

Internal Referencing:

- Evaluate things on what they think is appropriate.
- Make their own decisions.
- Motivate themselves.
- Know what they want, need, believe, feel and value.
- May ignore feedback.
- May be closed minded to learning.
- Use language such as intuition, inner possibilities, and inner vision.
- Dislike tight supervision.

External Referencing:

- Evaluate things on the outside world of rules, people and events.
- Look outside for guidance, information, motivation and decisions.
- Need feedback from others.
- Feel lost without guidance.
- May be people pleasers.
- May personalize feedback and use it for feeling bad.
- Cares about what others think.
- Use language such as authority, right and wrong, information from external sources, proper, acceptable.
- Enjoy feedback, validation, praise and affirmations.

**Description:**

This Meta – Program deals with where people invest their attention in relation to themselves or others. It is also about how people emotionally see the world of others.

Questions:

If there is a conflict of interest, do you focus on your own needs or those of others?

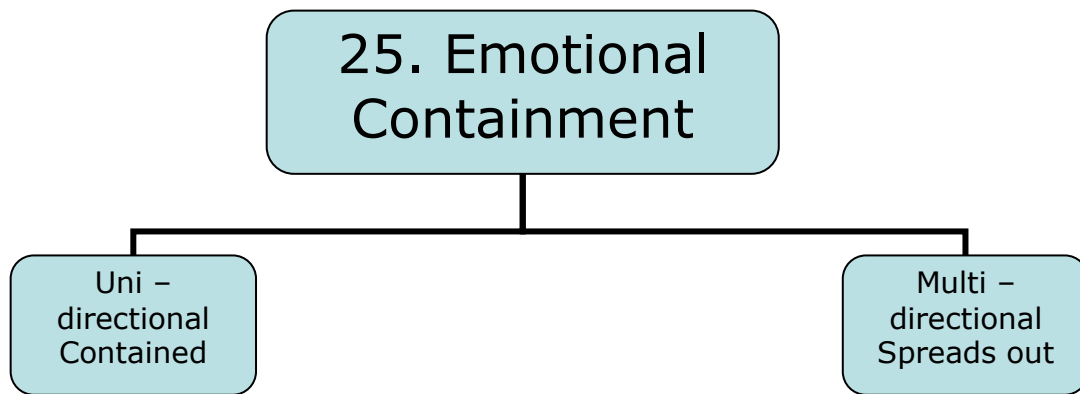

Where do you put most of your attention – on yourself or others?

Self – Reference Perceiving:

- Will think feel and evaluate on the basis of themselves.
- Motivate themselves and make their own decisions.
- Take responsibility for themselves.
- Know what they need, want, believe, feel and value.
- When over done, can neglect others and relationships.
- Will use the terms “I, me, my and mine”.

Other Referencing Perceiving:

- Focus attention primarily on others.
- Will care, value and nurture others.
- Involves the skill of taking the second position.
- Will look to others when making decisions.
- When over done, will attend to the needs of others and neglect themselves.
- When over done, will not speak up for themselves.
- Will use the terms “you, yours”.

Description:

This Meta - Program refers to how people experience and express their emotions. More specifically, whether their emotions are focused or diffused. Some people contain their emotions to specific events, while others experience their emotions “bleeding over” and affecting all other emotional states.

Questions:

When you get mad at work, do you take your emotions home with you and displace them on others?

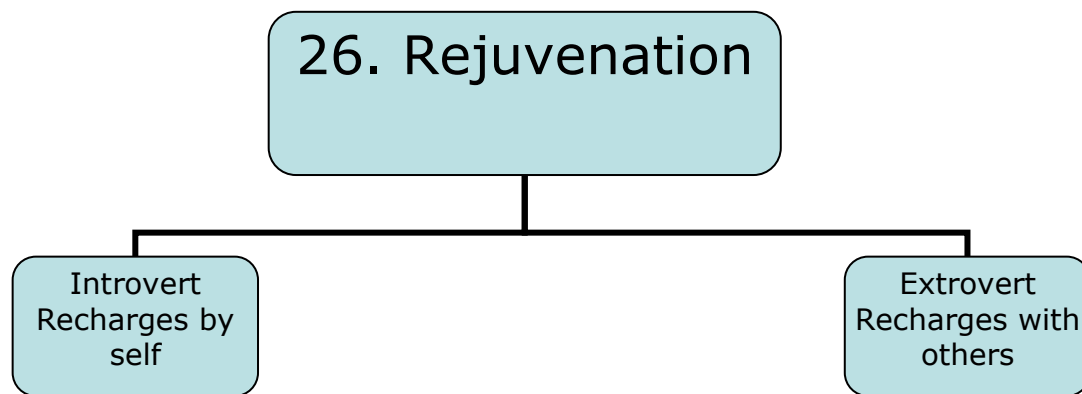

Do your emotions stay focused on what they relate to, or spread out to other areas of your life?

Uni - directional Perceiving:

- Contain emotions and emote them in a direct and singular way.
- Keep the emotions within the relevant context.
- Feels the emotions fully in the area of reference.
- Feels the emotions “cleaner” and more “distinct”.

Multi - directional Perceiving:

- When “down” in one area of life, are “down” in all areas of life.
- Emotions spread out to all areas of life.
- When overdone, may lead to moodiness, instability and displaced emotions.
- Great for when experiencing bright and positive emotions.

**Description:**

This Meta – Program refers to how people process things and deal with their emotions when they are down, tired, exhausted, stressed or need to renew their batteries. Introverts re-charge their batteries by being alone and spending time by themselves. Extroverts re-charge their batteries by being with other people, talking and going out.

Questions:

When you need to re-charge your batteries, do you prefer to do it alone or be with others?

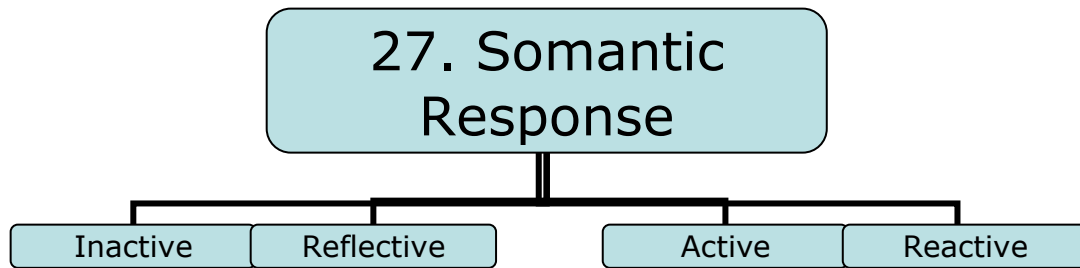

Do social events wear you out or re-charge you?

Introvert Perceiving:

- Re-charge by being alone.
- Enjoy peace of their inner world.
- Have a great depth of concentration and introspection.
- Taken to the extreme, leads to living as a recluse.
- When stressed, turn inwards.
- Use others to express energy, hopes, visions, but not for re-charging their batteries.
- Will have fewer friends, but deeper relationships.

Extrovert Perceiving:

- Prefer the company of others.
- Love crowds, parties and events.
- Are sociable, action oriented and impulsive.
- Find solitude distressful.
- Need others to re-charge them.
- Being alone feels empty and depletes them.
- Many friends, but not deep relations.
- In the extreme, may fear being alone.

**Description:**

This Meta – Program refers to how people process and respond to information. For some people, they respond in a very quick, immediate and impulsive way – they have an active style. Other people handle information more reflectively, thoughtfully and slowly – they have a reflective style.

Questions:

In a new social situation, do you usually act quickly after sizing it up or sit back to observe the situation?

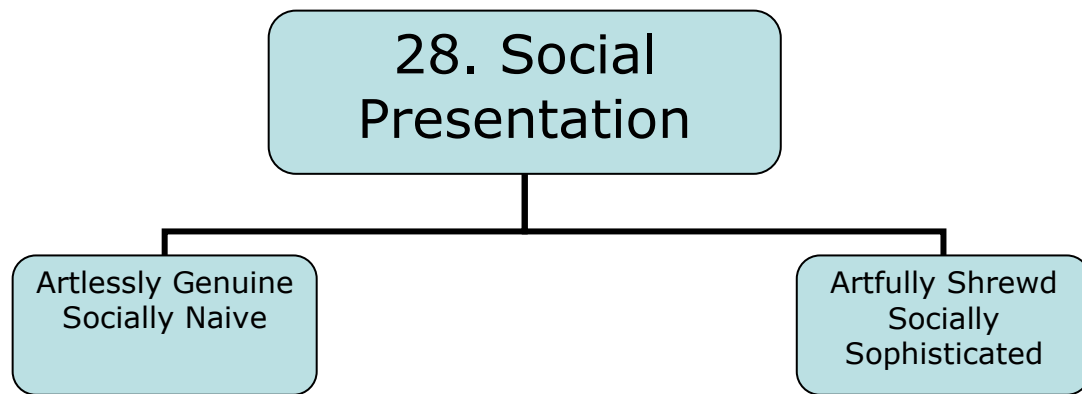

How much do you feel the urge to act when you are just thinking or talking?

Inactive to Reflective Perceiving:

- Think things through without acting.
- Prefer to study, ponder, before taking action.
- Can let things go for a long time before taking action.
- May procrastinate.
- Often have the Meta - Program external reference and other referent.

Active to Reactive Perceiving:

- Will act as they think (active) or before they think (reactive).
- Orient themselves in the world as doers who make things happen.
- Are movers and shakers.
- May make a lot of mistakes, but gets things done.
- Will talk fast, think fast and act fast.
- When overdone, may respond impulsively.

Description:

This Meta – Program refers to how people perceive their presentation in the world, and how much they mentally and emotionally manage their image. Some people care what others think of them, while others do not care at all.

Questions:

How much time do you spend anticipating what other people will think of you?

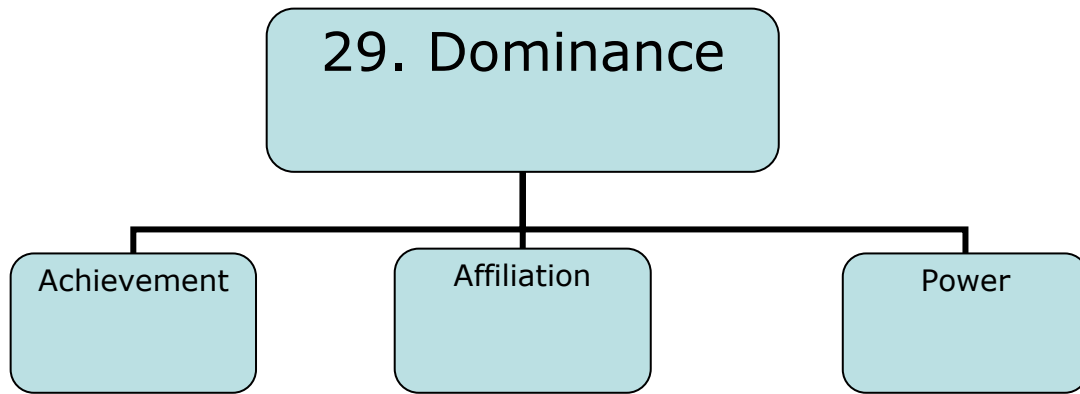

Do you not care what others think of you and prefer to be yourself, natural, forthright, direct, authentic?

Artlessly Genuine Perceiving:

- Doesn't care much what others think of them.
- Will devalue the whole social presentation as "not being real" and "fake".
- They prefer to be themselves.
- Have little or no social ambition.
- Can come across as artless and crude in social situations.
- When overdone, may behave rudely, inappropriately or anti socially.

Artfully Shrewd Perceiving:

- Will believe in value and care about their social presentation.
- Want to make no negative impressions.
- Value the image they create in the minds of others.
- Value politeness, tact, etiquette, protocol.
- Disvalue too much self-disclosure, expressions of thought and feelings, spontaneity.
- When overdone, can be manipulative, political and selfish.

**Description:**

In social situations where people interact, relate and communicate there is the emergence of social phenomena such as “power”, “control” and “influence”. This Meta – Program describes the style a person uses in handling or not handling power effectively. It relates to how a person perceives, thinks about and handles such experiences.

Questions:

How much do you emotionally see things in terms of power, affiliation and achievement?

What are your motives when interacting with others, power (dominance, competition), affiliation (relationships, co-operation) or achievements (results, goals)?

Perceiving via Achievement:

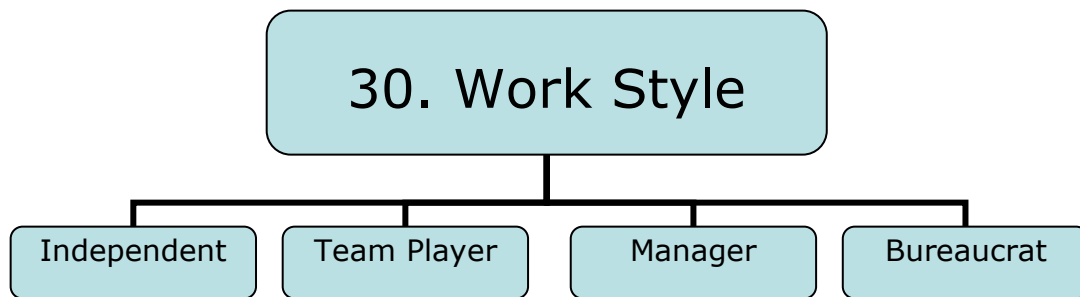

- Care about getting things done, team performance and making things happen.
- Will talk about competition, accomplishments, successes, and tasks.
- As leaders will focus on productivity and profitability.

Perceiving via Affiliation:

- Getting along with people is important to them.
- Will manage the relationship by using courtesy, co-operation, empathy and politeness.
- Value about maintaining good relationships (win/win).

Perceiving via Power:

- Value the feeling of dominating, competing, playing politics, being in charge.
- Think in terms of win / lose.
- Will use language such as power, who’s in control, status, influence positions, reputations.

**Description:**

This Meta – Program refers to how people process and handle the experience of working with others in a task-oriented situation like work, or any situation that involves getting a task accomplished.

Questions:

How do you want to relate in a group?

As you think about a work situation when you felt happiest, when and where did this occur?

Independent Perceiving:

- Perceive value and orient themselves independently.
- Have the capacity for management but do not want to manage.
- Like to work on their own and take responsibility for their own motivation and management.

Team Player Perceiving:

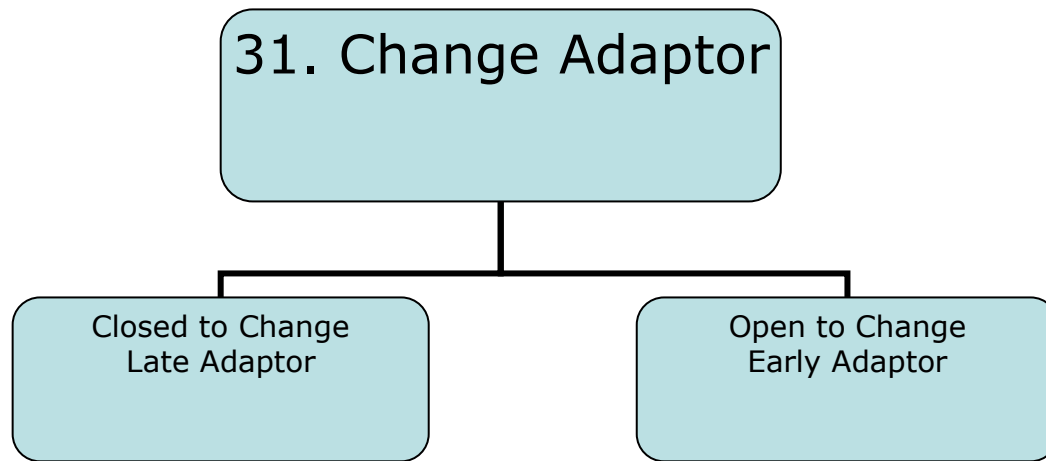

- Perceive value and orient themselves via a team playing mode.
- Like to co-facilitate the success of the group as a whole.
- Like terms such as “camaraderie” and “family”.

Manager Perceiving:

- Don’t hesitate in telling themselves and others what needs to be done.
- Value and orient themselves to manage self and others.
- Will take charge.

Bureaucrat Perceiving:

- Want to manage others.
- Prefer to have no one manage them.

**Description:**

How open or closed a person is to change depends upon their beliefs about change. This Meta – Program relates to how open or closed a person is to change. Does the person welcome and long for change, or resist and fear change?

Questions:

How willing and open are you generally when it comes to welcoming change into your life?

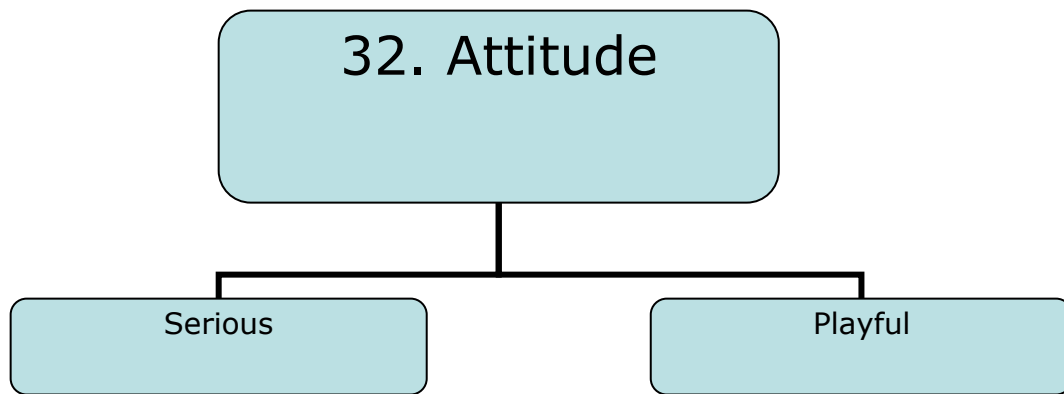

What do you feel emotionally when you experience change, planned or unplanned?

Closed to Change Perceiving:

- Dislike change and perceive it as disrupting or threatening.
- Will follow innovations rather than lead.
- Find themselves fighting the change process.
- Speak about keeping things the same, avoiding changes, and protecting what is already in place.

Open to Change Perceiving:

- Like change, long for it and desire it.
- Will adapt to new technologies, models and processes.
- Find change exciting, desirable and enriching.
- Use language such as adaptations, innovations, modifications etc.

**Description:**

A person's attitude about themselves, others, work, health and life in general can be anywhere on a continuum from serious to fun and playful. This Meta Program relates to how a person filters and colours their basic philosophy about life.

Questions:

Is your perspective on life more on the serious or humorous side?

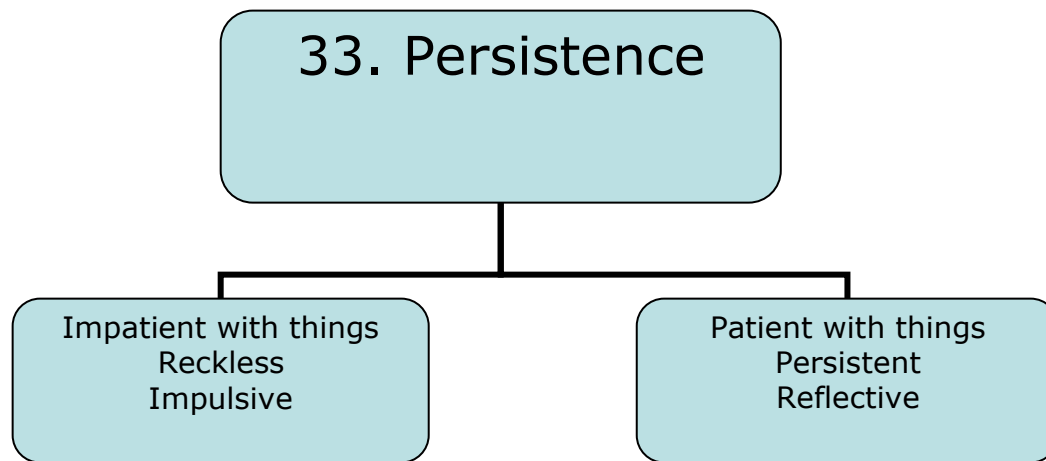

How much humour do you generally experience about yourself when you make a mistake?

Serious Perceiving:

- Positive traits include believing, caring, being earnest, disciplined, committed and focused.
- Have a "heaviness" about them.
- When overdone, the person may believe that the end justifies the means and be cruel.
- May have very strong beliefs.
- Can be closed to new learnings and adjustments.

Playful Perceiving:

- Playing, laughing and joking come easily.
- Have a "lightness" about them.
- Have to learn to become serious.
- Some use humour to fend off dangerous and threatening facets of life.

**Description:**

This Meta – Program relates to how people perceive, sort for things and filter their experiences by their degree of patience or impatience. With patience, a person can hang in there, persist and calmly consider things. Without patience the person's mind, focus, concentration and persistence are affected.

Questions:

How patient or persistent are you when you feel under pressure?

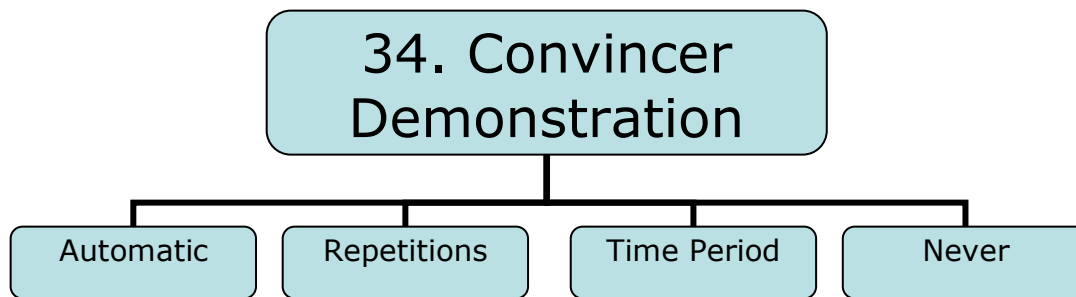

To what extent do you naturally operate in a patient and easy going way?

Impatient Perceiving:

- Full of energy, movement, activity, nervousness, distraction.
- Can feel under pressure.
- Attention seems to be scattered.
- Has a lot of nervous energy.
- Speaks quickly and will jump from subject to subject.

Patient Perceiving:

- Has a long-term view and can persist towards goals.
- Goes with the more natural flow of things.
- Knows that yelling, demanding or putting the pressure on themselves or others does not speed up the natural process.

Description:

This is Meta –Program is related to “Convincer Representation – 19 (looks right, sounds right, feels right or makes sense). However, this focuses on how a person makes a choice, and how they perceive the process of deciding. This Meta – Program looks at other factors and variables in the experience of feeling convinced: how many times and how long before a person is convinced.

Questions:

How often does someone have to demonstrate competence before you feel convinced?

How many times do you typically have to see, hear, read or do something before you feel convinced?

Automatic Perceiving:

- Easy to sell or convince.
- Trust people and things until that trust is proven foolish.
- Need little convincing, little proof and little argument.
- Can lead to being naive, trusting too much and too soon.

Repetition Perceiving:

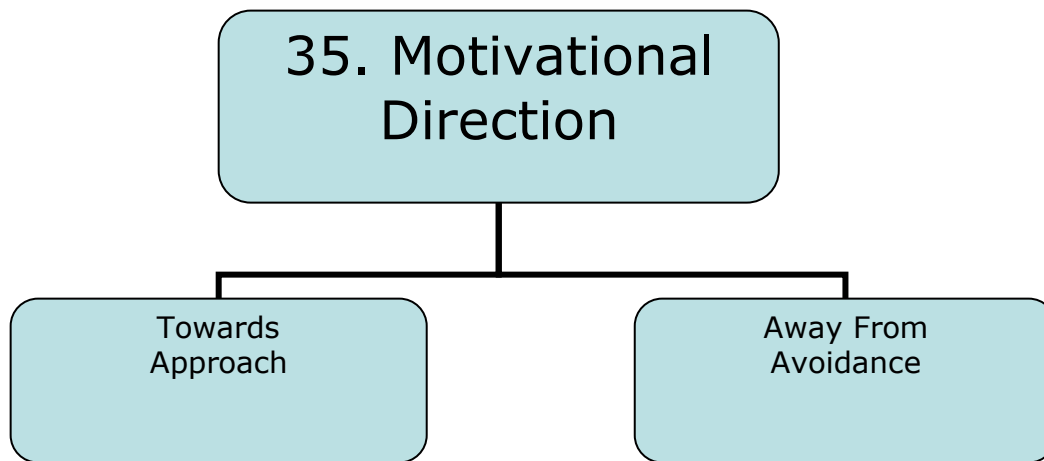

- Need to be exposed to the information or experience a certain number of times before being convinced.
- It takes a certain number of exposures before the information seems real to them.
- If repeated often enough, the person may believe anything.

Perceiving via Period of Time:

- Are convinced after being exposed to the information after a certain period of time.
- Time allows the idea to solidify in their mind.
- If the idea holds up after a certain amount of time has passed then the person is satisfied.

Never (almost never):

- Generally do not accept anything as believable.
- Consistently never trust.
- Some take a lot to ever trust.
- Excellent doubting skills.

Description:

This Meta Program relates to how people are motivated to take action and do something. Motivational energy involves moving towards something people want, and away from something people want to avoid.

Questions:

What do you want?

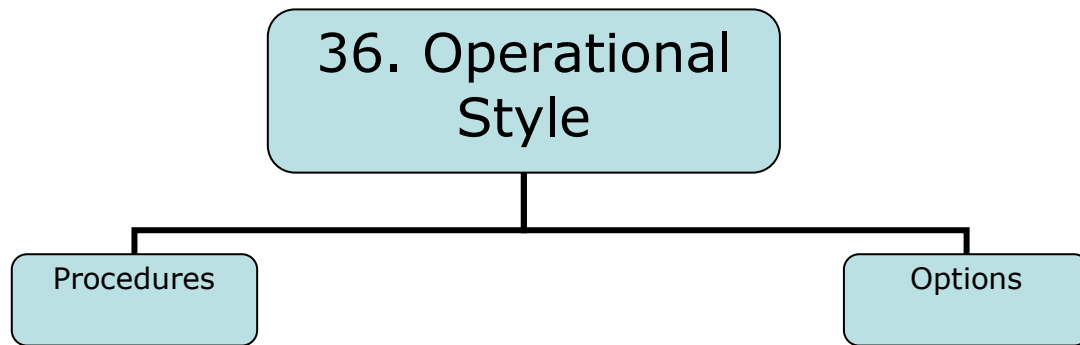

What will having this do for you?

Towards or Approach Perceiving:

- Move towards what they want.
- Have a go at attitude.
- Their goals pull them into the future.
- Are motivated to achieve, attain and obtain.
- Can have difficulty knowing what to avoid.
- Have dreams, visions and new possibilities.
- Will use language such as gain, have, get attain achieve.

Away from or Avoidance Perceiving:

- Move away from what they de-value.
- Avoid what they don't want.
- Use a go way from style.
- Are motivated to avoid, steer clear, get rid of aversions.
- Can have difficulty with goals.
- May be easily distracted by negative situations.
- Can see, recognise and deal with potential problems.
- Good at quality control and contingency plans.
- Use language such as stay clear from, stay away from, don't need.

**Description:**

This Meta Program relates to how people move through life and handle things. Some people prefer to follow procedures, while others prefer to have options, alternatives and choices. How we work with, filter and compare information.

Questions:

Do you prefer explicit instructions that provided step-by-step information?

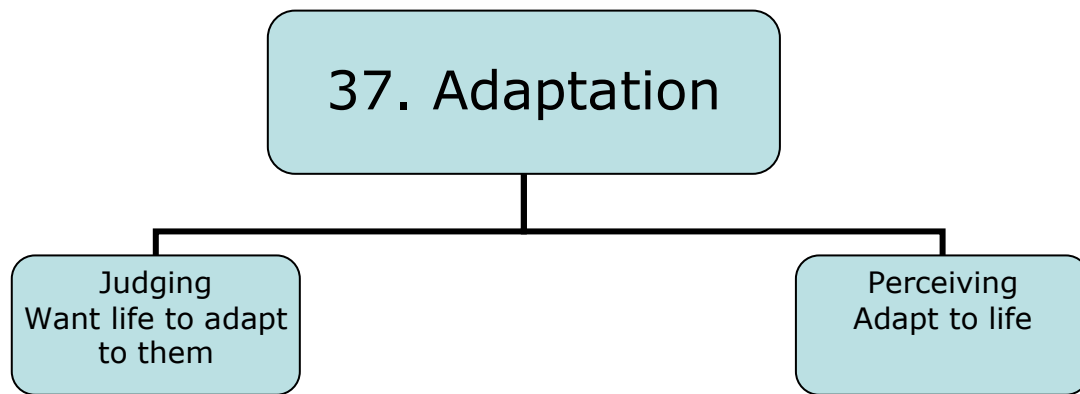

Do you prefer coming with your own process and alternative ways of doing things?

Procedure Perceiving:

- Like to follow definite and specific procedures.
- Like to do things the “right” way.
- May have a compulsive need to follow a procedure.
- Prefer to do things step by step, in stages and in the right sequence.
- Will answer “how” to a question rather than why.
- Use words such as “right way, proven way, and correct way”.

Options Perceiving:

- Are better at developing procedures.
- Have trouble following a procedure.
- Prefer to alter or improve the procedure.
- Will search for innovative and different approaches.
- Becomes bored easily.
- Likes to break the rules.
- Uses words such as “possibilities, choices, innovations and options”.

Description:

This Meta Program refers to how a person adapts themselves to life, the world, people and information that influences their personal world. It refers to the kind and level of control a person seeks to exert. Judges want to make life adapt to them, while perceivers adapt to life.

Questions:

Do you live life spontaneously or according to a plan?

If we did a project together, would you want to plan it out or just go with the flow?

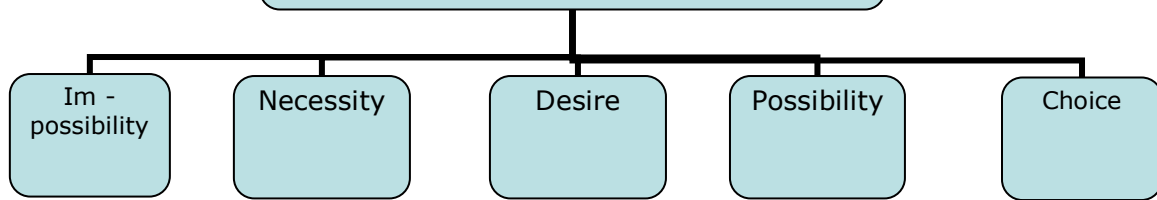

Judging Perceiving:

- Want to make life adapt to them.
- Live life according to plans, beliefs, hopes and desires to make things fit.
- Like order, closure, rules, categories.
- Uses language such as lists, evaluations, and plans.
- Invent plans to order, regulate and control life's events.
- Judge and evaluate likes and dislikes, looks for improvements.

Perceiving by Perceiving:

- Want to witness, observe and see life for itself.
- Want to join in and integrate life.
- More gentle, less concerned about right and wrong.
- Resist limits, order, structure and rules.
- Prefer options and may avoid closure.
- Perceive and float along with things.
- More ecological and passive approach.
- May have difficulty deciding, evaluating and taking a stand.
- Use language such as spontaneity, freedom, understanding, accepting.

38. Modus Operandi

Description:

This Meta – Program relates to how a person conceptualizes the world, and how they talk to themselves. A person's mental mapping of the world leads them to a specific linguistic distinction called modal operators. These words describe the conceptual worlds a person lives in. Examples include rules, permissions, prohibitions, desires, possibilities, impossibilities etc. Modal operator words create differing emotional and behavioural responses.

Questions:

How did you motivate yourself to go to work today?

When you think about going to work, what do you think or say to yourself?

Impossibility:

- Uses words such as "can't, shouldn't, must not".
- Has mapped out laws against certain options.

Necessity:

- Uses words such as "must, have to, should".
- Operates from a model of compulsion, control, law etc.
- Looks at life as a routine or burden over which they have little or no choice.

Desire:

- Uses words such as "want to, love to, and get to".
- Will describe big reasons, visions, hopes, dreams, and desires.

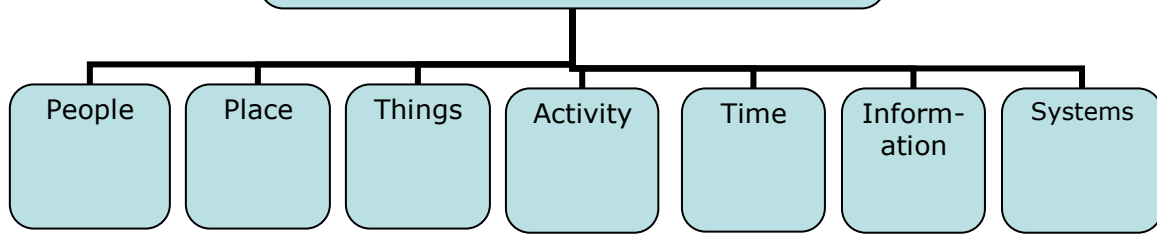

Possibility:

- Uses words such as "can, will, may, would, could".
- Believe they have some control over their life and choices.

Choice:

- Uses words such as "choose, want, get to, my choice"
- Their mental map allows for human will, intention and choice.

39. Preference

Description:

This Meta – Program relates to a person's area of interest and attention. All people have preferences about what they like to do and what they want.

Questions:

What is really important to you about how you spend your next holiday?

What do you naturally become passionate about?

People:

- Care most about people.
- Relate well socially, outgoing and friendly.

Place:

- "Where" is significant to them.
- Highly developed sense of direction.

Things:

- Focus on possessions, money and food.
- Seek meaning and happiness via things.

Activity:

- Focus on the "how" of an activity.
- Like doing things, going places rather than sitting around.

Time:

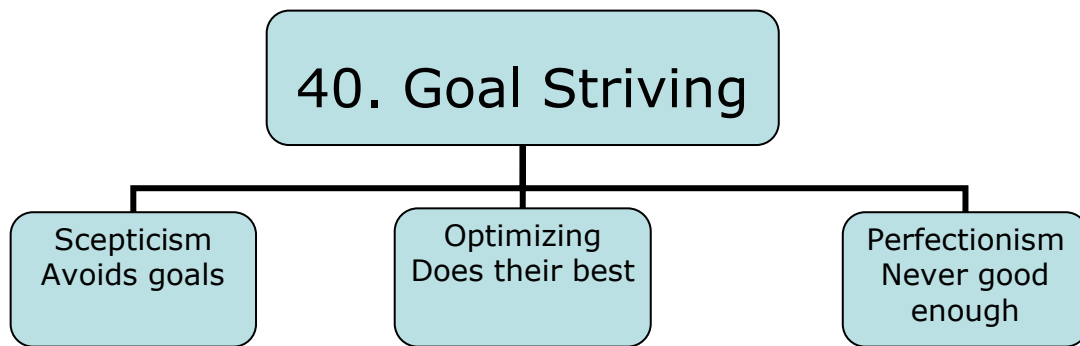

- Focus centres around when, past, present or future).
- May have different meanings attached to time.

Information:

- Care about information they are learning.
- Sort for what, from whom. The value of the information and how it is applied,

Systems:

- Care about processes, inter-relationships, plans and procedures.
- Focus on the functioning of systems, dynamics and contexts.

**Description:**

This Meta Program relates to how people think, feel perceive and make choices about goals. People differ in how they perceive and choose to go after goals. Some people reach for perfectionism, some do the best they can while others avoid setting goals altogether.

Questions:

If you set yourself a goal today, how would you begin working on it?

Have you ever set yourself a goal and gone after it?

Scepticism Perceiving:

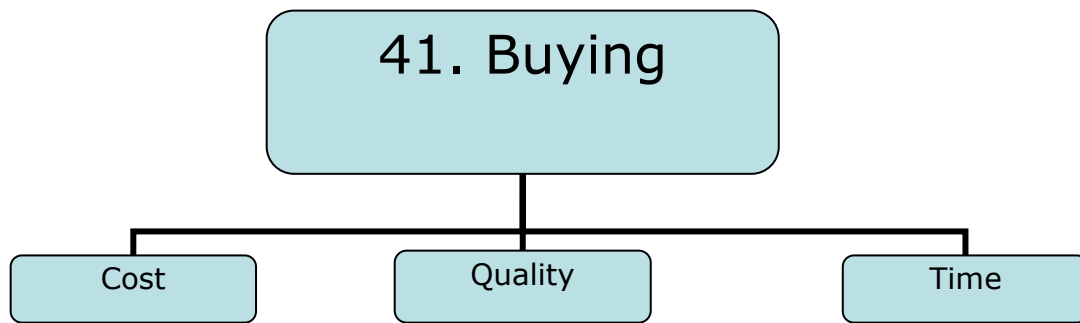

- Avoid goal setting and striving after goals.
- View goals with doubt, scepticism and a defeatist attitude.
- Avoid directly thinking about the future.
- Treat goals setting talk as useless and worthless.

Optimizing Perceiving:

- Do their best and leave it at that.
- Set goals in small steps and celebrate achievement.
- Fun is in the process.
- Flow along better.

Perfectionism Perceiving:

- Never feels satisfied with his or her performance.
- Can always find flaws in performance (own and other's).
- Sets unrealistically high goals.
- Is constantly frustrated.
- Live life in the future.
- Will procrastinate as a protective device.
- Will talk a lot about the end product.

**Description:**

This refers to what people focus on in the process of deciding to buy something. Most people will consider cost, quality and time. It is possible for these three values to conflict with each other, or be overridden by a list of other factors (eg convenience, comfort etc).

Questions:

When you are making a purchase, what is your main concern, the price, time or quality?

When you are in the process of buying something, which is the first value you look for and perceive?

Cost:

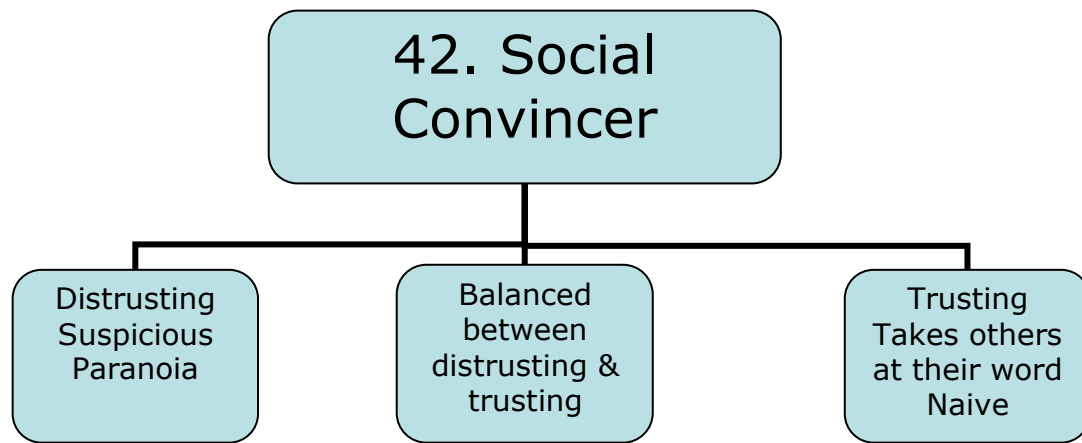

- Focus entirely on the price of the product.
- The first question is "How much is it?"

Quality:

- Focus is entirely on the quality of the product.
- Will ask if it will last or fall apart and need repair.

Time:

- Focus is on time.
- Will ask "When can I get this?", "How long will I have to wait?" and "Is it available now?"

**Description:**

This Meta – Program relates to people’s concepts, emotions, decisions, experiences in trusting other people. Some people use a thinking – feeling pattern of distrust, while others trust. Some people find it hard to decide to choose to trust others, while some find it easy to trust others.

Questions:

When you meet someone new, do you immediately have a sense of trust and openness, or thoughts and feelings of distrust, doubt, questions or insecurity?

How do you relate to people before you know them well? Do you trust or approach with caution?

Distrusting Perceiving:

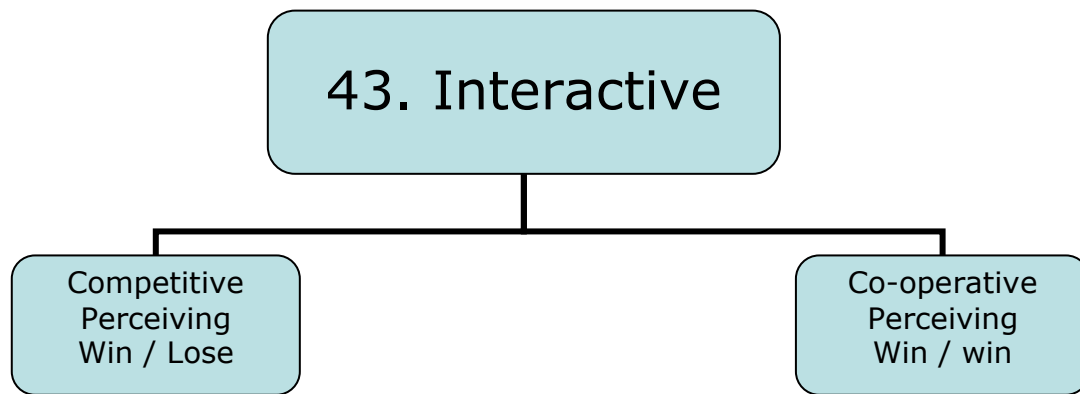

- Immediately question, wonder feel defensive or hold back when meeting new people.
- Will not immediately trust.
- May be guarded, jealous, and defensive.
- May come across as unfriendly and not approachable.

Balanced:

- Can distinguish friendliness and openness from trust.
- Can be friendly, invite trust and wait until they have sufficient evidence for recognizing someone’s trustworthiness.

Trust Perceiving:

- Immediately trust, feel connected and act trustingly.
- Come across as warm, friendly, interested and outgoing.
- When overdone, may be manipulated and taken advantage of.

Description:

This Meta Program relates to the style in which people interact with others, things, information and events. Some people approach life with a competitive, win/lose attitude, while others have a co-operative win/win attitude.

Questions:

When working with someone new, do you automatically become competitive or co-operative?

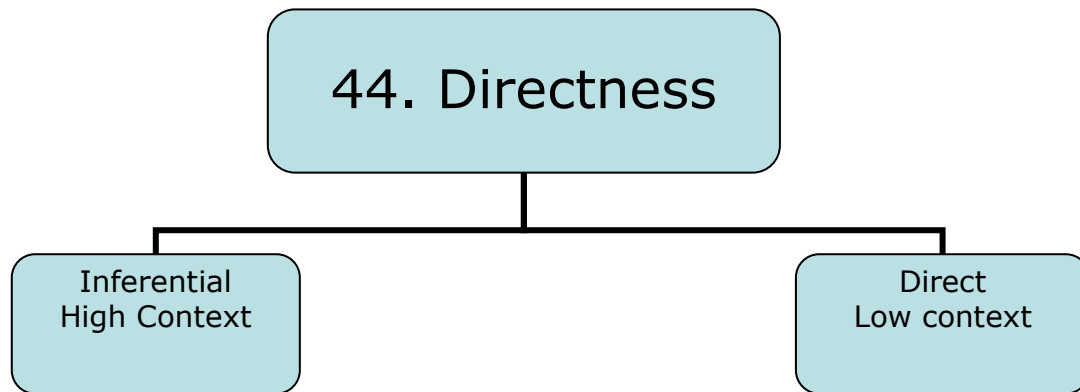

How often do you think about wanting, getting ahead and out scoring others?

Competitive Perceiving:

- Has a win/lose attitude.
- Process experiences, thoughts and emotions in terms of comparison and competition.
- Winning, beating and out doing are important.
- Can be a greatly motivated.
- When over done, can lead to burn out and stress.
- Uses language such as better, best, fastest.

Co-operative Perceiving:

- Has a win/win attitude.
- Thinks about helping others to share the experience.
- Collaborating, working together and networking are important.
- Are interested in making the experience pleasant, enjoyable for everyone.

**Description:**

This Meta Program relates to the amount or degree of context people need when communicating. "Context" is the information that surrounds an event. High or low context has to do with the way people explicitly assert or implicitly assume context. As a practical consequence of low or high contexts people communicate either directly or indirectly.

Questions:

In a given context (business, friendships etc), how much information do you already know and that you don't need to be made explicit?

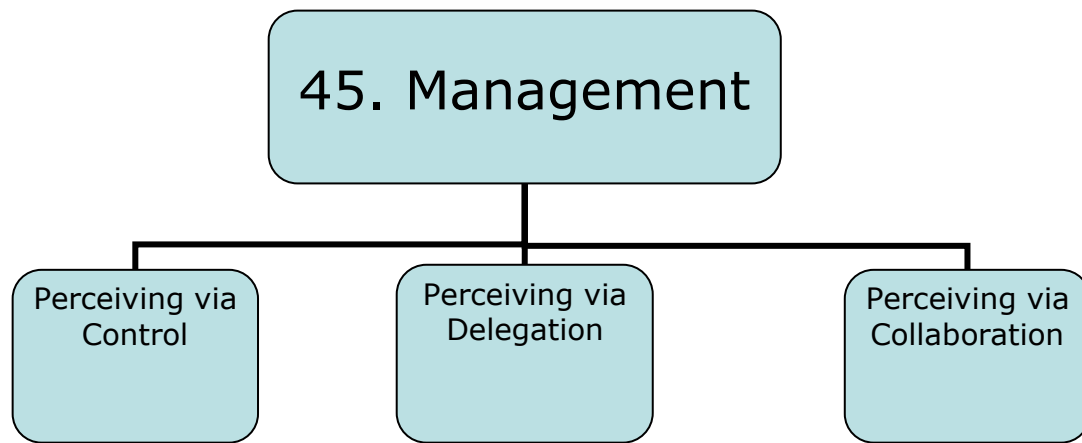

What do you believe about being direct and forthright?

High Context and Inferential Perceiving:

- Believe that cultural context creates and holds the information.
- Think inferentially, assume and "just know" what things mean and what others want.
- Communicates in ways that just assumes things, does not come right out and say what they mean.
- May be frustrated by low content people who insist on giving them information, which they do not need.

Low Context and Direct Perceiving:

- Direct in speaking, may come across as brash, confrontational or insulting.
- May be at a loss if high context people do not give them all the information.

**Description:**

This Meta - Program relates to how people perceive and make choices when working with others around experiences that have to do with managing a task, project or any goal they want to achieve. Some people like to control, some delegate and others prefer to collaborate.

Questions:

How do you generally like to work on projects, by yourself, with others or as a boss?

If you were in a management position, what sort of a manager would you be?

Perceiving via Control:

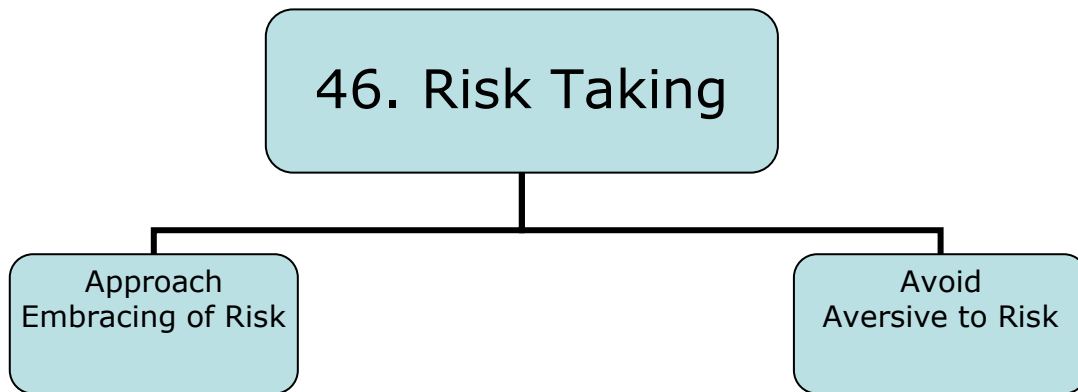

- Likes to take control of things and just do them.
- Like to take action and be active.
- May operate from a "Self" meta - program.

Perceiving via Delegation:

- Will seek out others to delegate tasks, responsibilities and assignments.
- Some delegate to "be in control and tell others what to do".
- Some delegate as an expression of sharing, guiding, leading, mentoring or empowering.

Perceiving via Collaboration:

- Prefers to create a joint collaboration.
- Checks with everybody involved to make sure that everyone is on board.
- Works towards a consensus within the group.

Description:

This Meta – Program relates to how people perceive and make choices around the awareness and experience of risk. Some people are explorers, pioneers, inventors and discoverers of change, while others prefer to keep things the same and resist change.

Questions:

What are your thoughts and feelings about new things, risks and adventures?

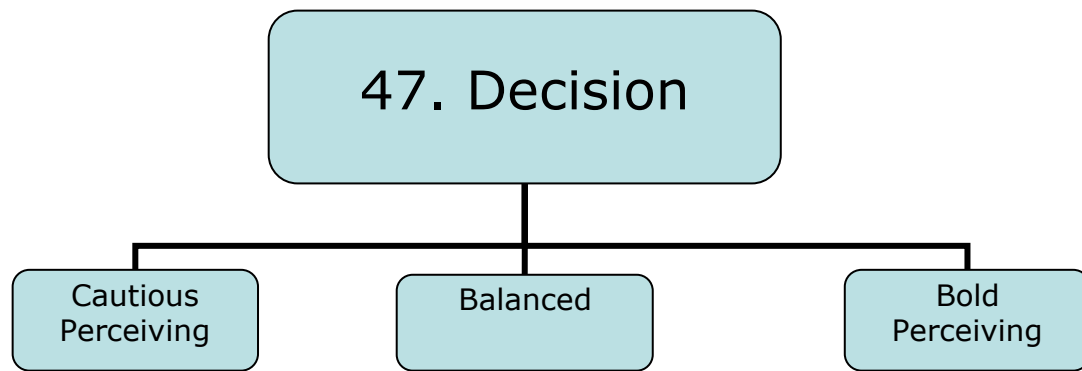

Do you usually get excited or scared when it comes to facing a big risk or an unknown?

Approach, Embracing of Risk:

- Embrace risk and change.
- Quickly follow a change that is occurring in a culture, community, or society.
- May find danger a turn on.
- May feel bored without a sense of danger, thrill and risk in their lives.
- Actively seek new and different ideas.
- Will be entrepreneurs in the business world.

Avoid, Aversive of Risk:

- Resists change until it is well proven and accepted.
- Prefer safety, familiarity, and the known.
- Value security, continuity and loyalty.
- Find adventure scary and will go to great lengths to avoid it.

**Description:**

This Meta – Program relates to decision making. Some people are quick to make decisions, while others take forever.

Questions:

When you think about making a decision, what are your first thoughts and feelings?

Do you find the process of making a decision an easy or difficult thing?

Cautious Perceiving:

- Find decision-making unpleasant, difficult and even painful.
- Will weigh the advantages and disadvantages for each facet.
- Fear the consequences of making a bad decision.
- Will hesitate and procrastinate and be indecisive.
- Will let things get to a crisis so they decide under pressure.

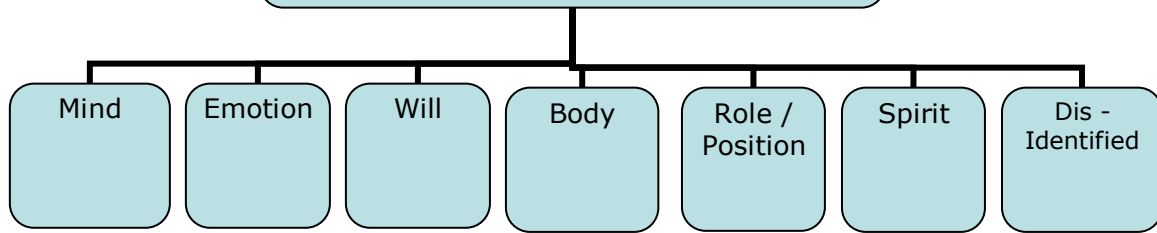

Balanced Perceiving:

- Are neither bold nor cautious.
- Are neither excited nor fearful.
- Pragmatically weigh up the pros and cons.

Bold Perceiving:

- Are self-assured, sometimes to a fault.
- Think and act quickly.
- If impulsive they may make a decision they regret.
- Done well, they know their values, criteria, situation, market and context very well and trust their intuition.

48. Self Experience

Description:

This Meta – Program deals with how people experience themselves in terms of their self-identity. People differ in how they define their concept of “self”. Some people identify with certain factors, for example thoughts, emotions, will, body, roles, spirit and positions,

Questions:

How do you define yourself?

As you think about your thoughts, emotions, will, body, roles and positions, which one seems the most real to you?

Thinking:

- Will identify as a thinker if using thinking and cognitive powers to cope with life.

Feelings:

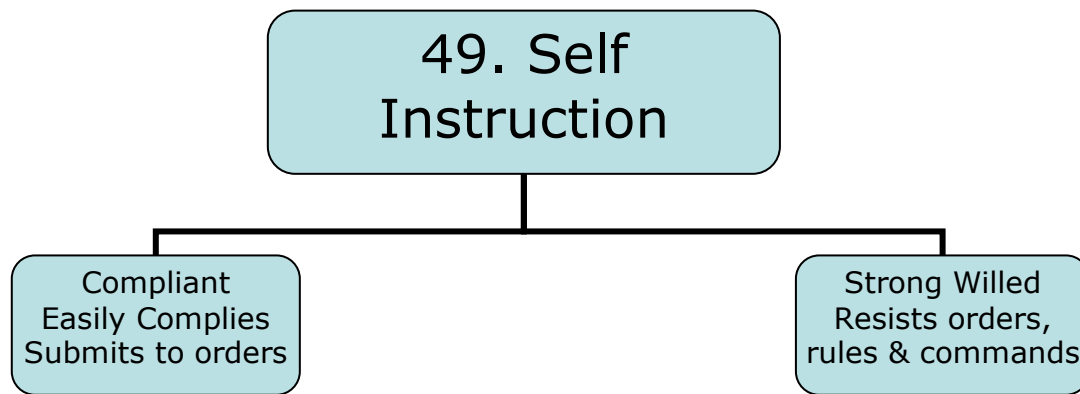

- Will identify as a feeler if stepping into an experience and associate with it.
- Will use feelings of the experience to define themselves.

Choosing:

- Will identify as a chooser if sorting for choice is the main power used.

Etc:

- Will define selves by jobs, roles, experiences, degrees, relationships, body, health, ill-health, disease, political party, religion, ethnic group etc.

Description:

This Meta – Program relates to how people experience themselves when face to face with someone telling us something, giving us instructions, or even with the principle of being told something. Some people respond by complying, some resist, while others question.

Questions:

How do you think and feel when given instructions?

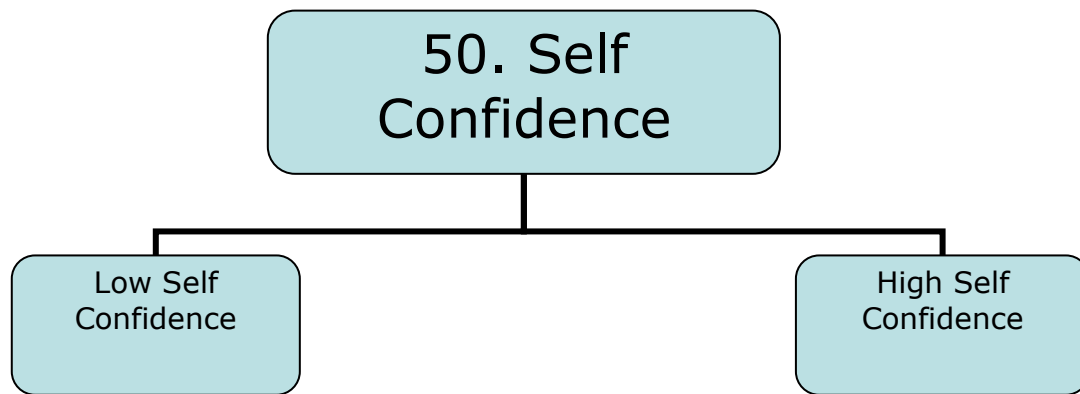

Do you think of yourself as compliant, that you easily go along with the choice of others?

Compliant:

- Responds immediately and automatically by complying in a pliable, receptive, open and sometimes sensitive way.
- Complying does not carry much semantic significance.
- Follows the rules, is a team player.
- Will say, "Whatever you say".

Strong Willed:

- Have a difficult time being told something.
- When given orders, or instructions, will resist the information.
- Does not like being told.
- "Telling" is semantically loaded.
- Reads telling as control, manipulation or insult.
- Will say "I hate it when people tell me what to do".

**Description:**

Self-confidence relates to a person's sense of competence regarding their feelings of capacity, ability, experience and pride that they can do certain things with skill and ability. Self-confidence is conditional. It relates to human doing behaviour, not being behaviour (self esteem). Some people have high self confidence, while others have low self confidence.

Questions:

What is it like for you to acknowledge the lack of self confidence in a given area or skill?

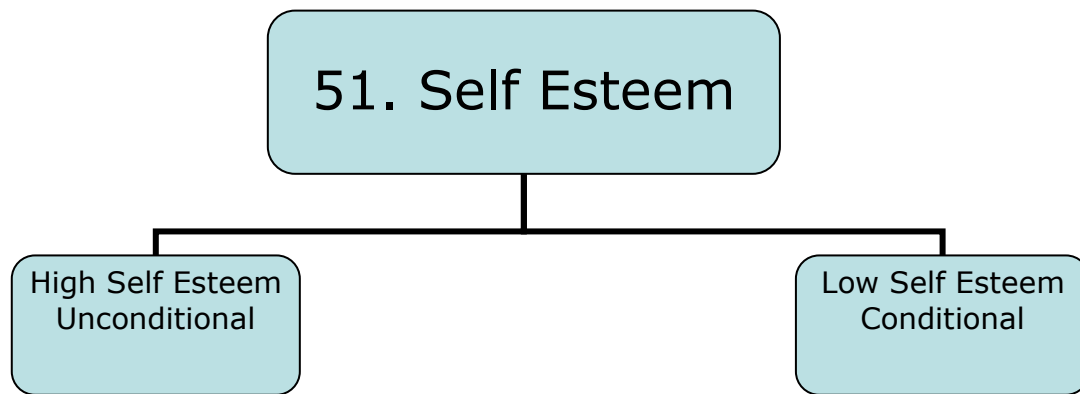

When you have the competence of a given skill, are you able to access and accept those feelings of confidence?

Low Self Confidence:

- Discount skills, talents and aptitudes.
- May focus on the things that s/he cannot do well.
- May feel low confidence in just about everything.
- May seek to be "perfect" in all skills, and create an overall sense of low self confidence.
- Will use language such as unsure, indecisive, confused, doubts, questions and not knowing.

High Self Confidence:

- Count the things they are good at, even if it is just making the bed.
- Can feel good about what they are good at.
- Can acknowledge being good at something in the presence of others.
- Will dress, walk talk and hold themselves with confidence.
- Feeling confident, without having the skills to back it up is foolish.
- May present themselves as "a know it all" if overdone.

**Description:**

Self esteem refers to a person's sense of worth and how they view themselves as human beings. Some have extremely high self esteem, while others have extremely low self esteem.

Questions:

Do you think of your value as a person as conditional or unconditional?

How easily can you say, "I am a loveable, I am precious"?

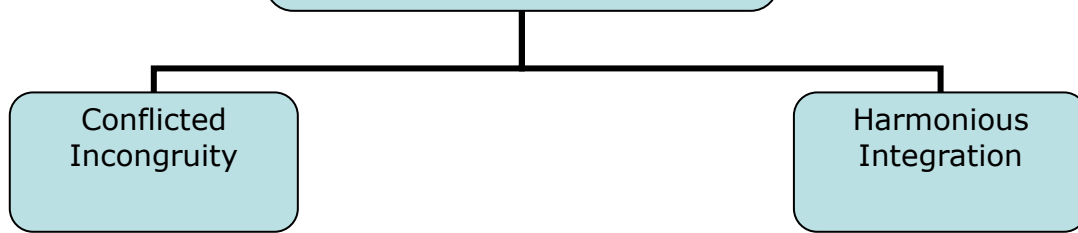

High Self Esteem - Unconditional:

- Believe in one's worth as a human being.
- Has a high sense of innate worth and dignity.
- Has unconditional love for self,

Low Self Esteem - Conditional:

- Believes they must earn the right to be worthy.
- Confuses self esteem with self worth, therefore making it conditional.
- May be on a treadmill of achievement to try to "prove" worth via "doing".

52. Self Integrity

Description:

This Meta – Program relates to how a person lives up to their ideal self. It relates to the feelings of conflicted and incongruous with a person's higher self.

Questions:

How well or poorly do you live up to your ideal self?

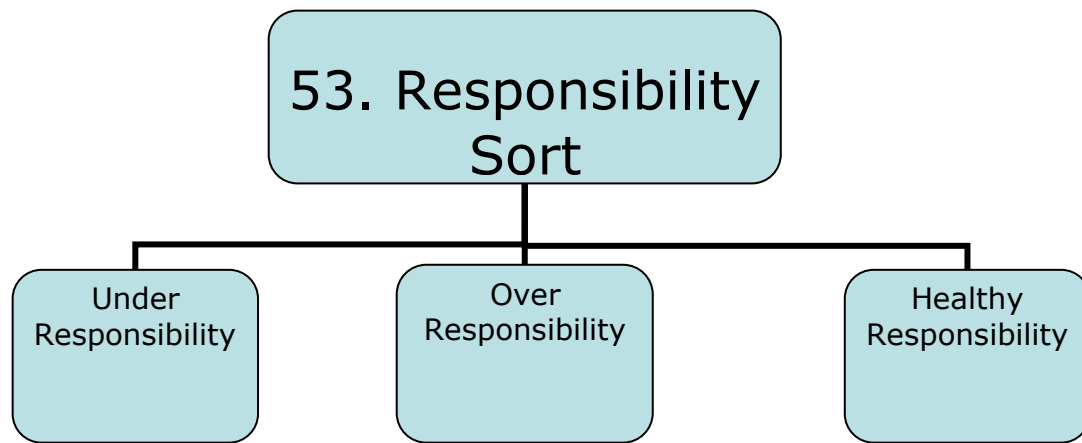

Do you feel integrated and doing well in living true to your values and visions?

Conflicted Incongruity:

- Feel inwardly torn and conflicted.
- Lack a sense of congruence.
- Feel at odds with themselves.
- Expends lots of internal energy conflicting and fighting with themselves.
- Have negative emotions and judgements of insults towards themselves.
- May say one thing yet live another.

Harmonious Integration:

- Feel congruence between their ideal self and their actual experience.
- Feel that they have a high self integrity.
- Have a strong sense of self acceptance and centering.
- Can devote energy to actualizing their values and visions.
- Their talk fits their behaviour.

Description:

Responsibility refers to the ability to respond. It involves the four powers of thinking, feeling, speaking and acting. Each person is responsible for their own responses. Responsibility can be divided into two sections: responsibility *for* ourselves (accountability) and responsibility *to* others (relationship). Some people can own and accept their responses, while other people think just the opposite; that *others* are responsible for their own thoughts, emotions and behaviours. These people tend to move away from responsibility by avoiding or ignoring it.

Questions:

When you think about having and owning responsibility for something, what thoughts, memories and emotions do you experience?

Has someone ever held you responsible for something that went wrong and felt very negative to you?

Under Responsibility:

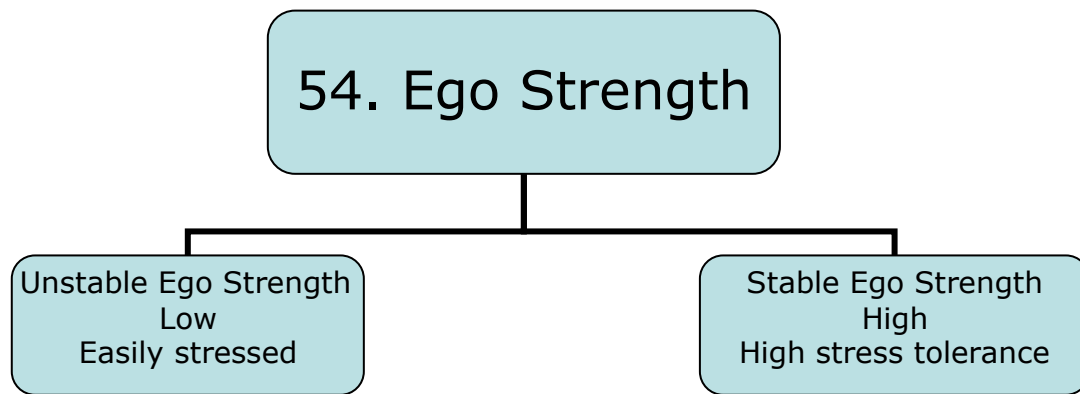

- Fail to take ownership of their thinking, emoting, speaking and behaving.
- Rely on others to take care of them.
- Fail to accept responsibility *for* themselves.
- May be reactive, passive, victim thinking and co-dependent.

Over Responsibility:

- Assume too much responsibility.
- Take on care taking roles.
- May excel at problem solving, sympathising, and caring.
- May feel they are responsible *for* other people.
- May come across as intrusive.

Healthy Responsibility:

- Assume responsibility for themselves and to others.
- Know when to give and when to receive.

**Description:**

Ego strength refers to the strength of a person's mind to face reality for whatever it is. Ego strength is developed through education and experience. Those with high ego strength face the facts without falling apart. They have inner resources, a sense of power, self efficacy and self confidence. Those with low ego strength may have almost no ability to look reality in the face, accept it and deal with it. They may resort to a fight or flight response.

Questions:

When you think about some difficulty arising in everyday life, what usually comes to mind?

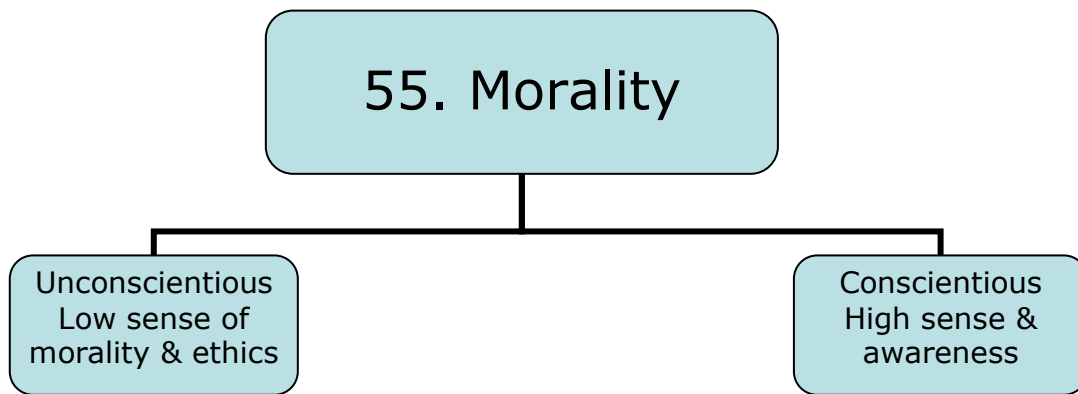

Where do your mind and emotions go when you face a problem?

Unstable Ego Strength:

- Almost no ability to face reality.
- This is how people respond during infancy and childhood.
- Easily and quickly feel frustrated.
- Worry, fret, feel insecure, unstable and emotionally distressed.
- Will delay and procrastinate, hate, be guilty, have contempt for them selves, others and life.
- Feel panicky, act impulsively and reactively.

Stable Ego Strength:

- Faces and addresses reality.
- Copes and masters things thrown their way.
- Takes a more philosophical approach to life.
- Stay cool, calm, unruffled and objective.
- Immediately go to problem solving.
- Work patiently, and avoid all the drama.

Description:

This Meta – Program deals with how people sort for morality and ethical concepts. Some sort for and perceive moral issues everywhere. Others operate as if there are no such things as moral or ethics. Some people sort for guilt, wrongness, badness, shame, and worthlessness in nearly every action, others seem to never perceive that any action could be wrong.

Questions:

What do you think about misbehaviours that hurt and violate others?

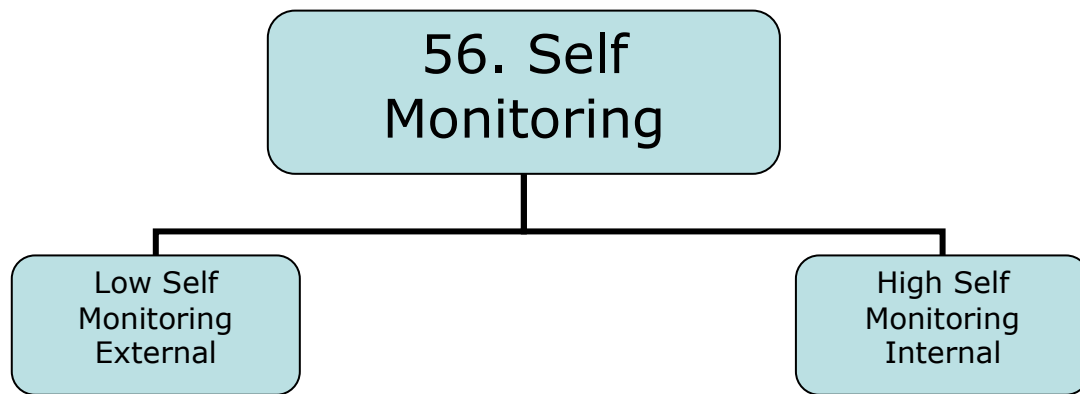

When you think about making a mistake (eg socially), what thoughts and feelings flood your consciousness?

Unconscientious:

- Have a poorly developed sense of super ego.
- Do not recognize actions that could be wrong and induce guilt.
- Disregard obligations, rules, ethics, morals, etc.
- Live self indulgently, narcissistically, disrespectfully.
- Little or no regard for others.
- Can lie, cheat, misbehave, without any guilt.
- Seem unable to learn from their mistakes.
- When over done leads to sociopath.

Conscientious:

- Have a well developed super ego.
- Sort for rightness and wrongness of events.
- Responsible and self disciplined, and a sense of duty.
- When overdone can leave them prone to guilt and evoke feelings of self badness etc.
- Will talk about doing the "right thing".
- May become self righteous, fanatical and rigid.
- May have a distorted view of themselves, and fail to see their own fallibility.

**Description:**

This Meta Program relates to the ability and awareness to know oneself, to turn inward and to recognize when one is experiencing emotions, desires, wants, impulses etc. It can be described as “intra-personal intelligence”. It implies the ability to monitor oneself, and how well a person does this. The degree to which a person self monitors can be described in terms of high and low.

Questions:

How much do you monitor yourself when you are stressed, angry, joyful etc.?

What are your mental and emotional weaknesses?

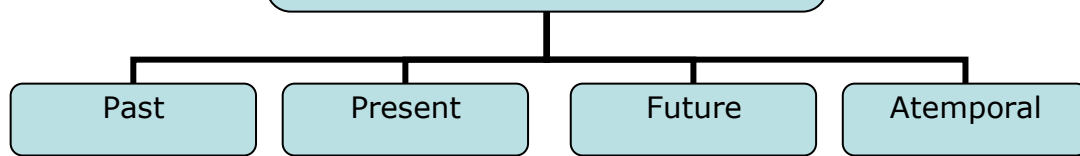

Low External:

- Low self monitoring.
- Have difficulty telling what they feel or think.
- May not know how to turn inwards.
- Attention is turned outwards rather than inwards.

High Internal:

- High self monitoring.
- Easily know their own thinking, emotions, needs, impulses, choices and inner world.
- Turning inward is easy for them.
- If they are inwardly conflicted, their experience can be one of painful self awareness they feel they cannot get away from.

57. Time Zones

Description:

Time is a construct people create by representing events then comparing those events in their mind. How people process time determines how they understand time at various meta levels, how they experience it at the primary level, and how they respond to it. From events, people represent a sequence of activities – things that have happened, that are happening, and that will happen.

Questions:

Where do you put most of your attention, on the past, present or the future?

If you closed your eyes and pointed to the past, where would it be?

Past:

- Think about what they have experienced and what those experiences mean to them.
- Use a lot of past references and past tense in their language.
- History and tradition are important to them.

Present:

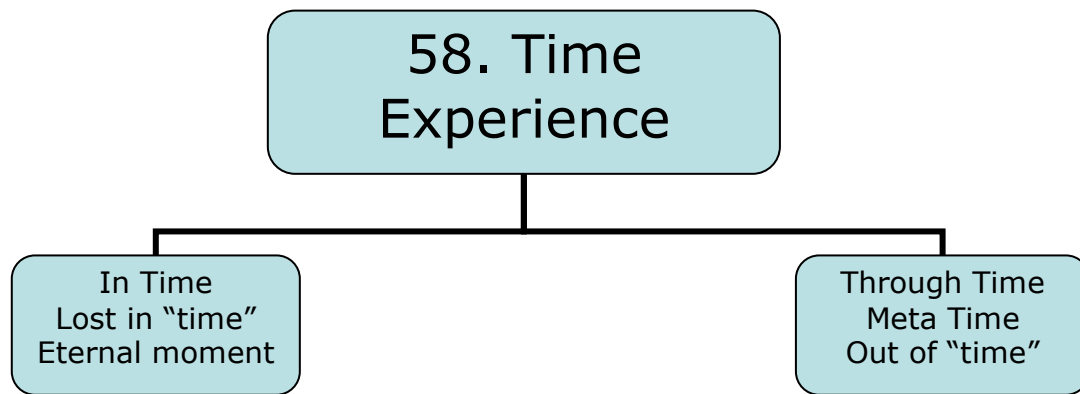

- Live in the here and now.
- Talk with present tense orientation.
- Seize the day.
- When overdone, can fail to think about consequences.

Future:

- Focus on what is yet to happen, dreams, visions and hopes.
- Talk with future tense.
- When overdone, fail to make plans for today.

Atemporal:

- Live outside of a time consciousness.

Description:

This Meta Program relates to how a person experiences time. Some people step into time and get lost in it (in time), while others experience time at a distance, and have a more clear, objective Meta position to time (through time).

Questions:

How do you measure your sense of time past present and future?

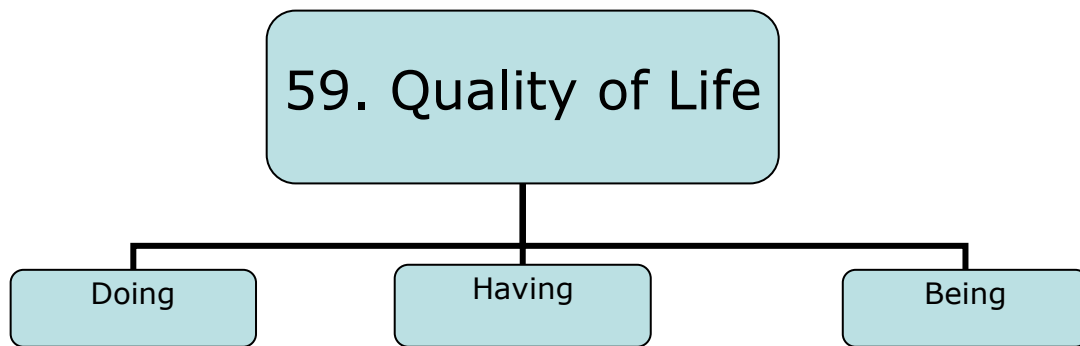

How do you tell the difference between events that have already occurred, those occurring now, and those that will occur?

In Time:

- Put their pasts behind them, and their future in front of them.
- Their time line will go through their body.
- Code memories by stepping inside the movies.
- Easily get caught up in the eternal now.
- Have less regards for time constraints.
- Are more random, creative, out of sequence.
- Memories are sorted in an unconnected way so they can quickly jump across boundaries of time, subject matter and people.

Through or Out of Time:

- Time line does not go through the body, but stays apart from them.
- Can step Meta to time.
- Time lines go from left to right or up and down so it can be broken into sequential stages.
- Aware of time's duration.
- Memories are stored so they can observe them from outside the movie.
- Like structures, rules, protocols and clocks that keep time.
- Code memories in order so they can be accessed in a sequential manner.

**Description:**

This Meta Program relates to a person's perspective about life and living and experiencing a high quality life. People mostly perceive life by its quality in terms of being, doing or having, or a combination of these.

Questions:

To what extent do you think of yourself in terms of what you do, have or experience?

Are your goals mostly about being, doing or having?

Doing:

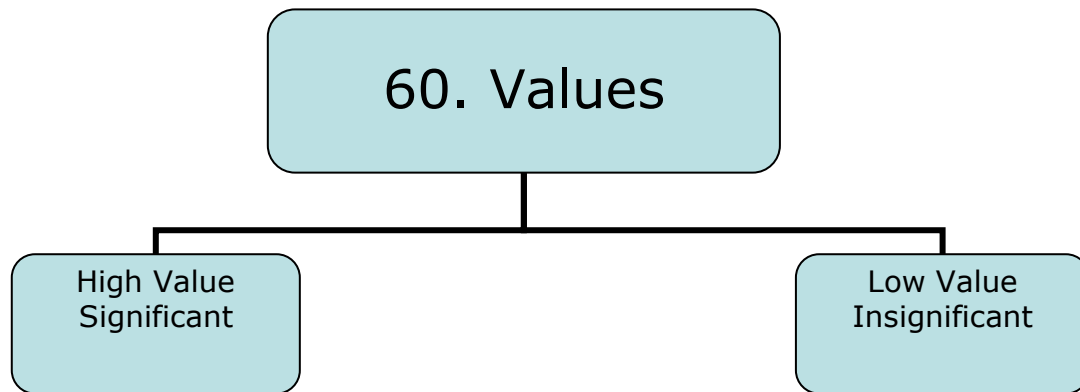

- Performance and achievement oriented.
- Task oriented.
- High confidence in what they can do.

Having:

- Focus on wealth, possessions, status and riches.
- May judge their self value and esteem in terms of what they have.

Being:

- Internal focus.
- Value the experience in and of itself.
- Recognise worth and value as a given.

**Description:**

This Meta Program relates to what people deem important. Values arise from thoughts, ideas, understandings and emotions about what people treat and view as important, significant and meaningful. Values are beliefs, representations and understandings. People value every Meta program. For example, if a person thinks globally, then expect that person to perceive global thinking as valuable.

Questions:

What do you think is the most significant thing about your relationship, job, ideas etc?

What so you invest your time, money and energy into?

Values:

- People apply a state of value to their representations of a person, place, thing, event idea etc.
- This Meta stating energises and intensifies the representations.
- Then people experience Meta states of appreciation, joy, concern, love, desire etc.
- Whatever people hold as significant, they transform into a value.
- To communicate, appeal to the person's values.
- People cannot help but respond to their won values.
- A person's value words are the correct passwords to reality.
- Values carry a lot of emotional impact.
- Values work as anchors for inducing people into the states they value.
- Gather information through the senses, eg seeing, listening, feeling, tasting and smelling.
- Accessing an uptime state.
- Prefer facts and figures.
- Practical, down to earth, real.
- Prefer demonstrations as a source of information.
